ABOUT THIS REPORT

Mubadala Energy is pleased to launch the fifth publication of our annual Sustainability Report, which highlights our performance, efforts, and forward plan regarding our material environmental, social and governance (ESG) topics for 2023.

We are committed to responsibly providing energy to meet growing global energy demand, ensuring that in the process, we not only deliver on our targets to our shareholder, but we also positively impact the environment and societies in which we do business. The parameters within which this report was prepared are outlined to the right:

Reporting Period

This report captures data based on a detailed list of sustainability topics for the period January 1st to December 31st, 2023.

Reporting Standards and Frameworks

The report has been prepared in accordance with several sustainability reporting standards, including the Global Reporting Initiative (GRI) 2021 Revised Universal Standards, the GRI 2021 Oil and Gas Sector Specific Standards, and the 2020 International Petroleum Industry Environmental Conservation Association (IPIECA) Sustainability Reporting Guidance.

Our disclosures cover issues that are most material to our business and its stakeholders, with these areas clearly identified through a transparent materiality assessment process. In this year's assessment we have considered the "double materiality" methodology, derived from the 2023 European Union's Corporate Sustainability Reporting Directive (CSRD), and other related methodologies.

We also incorporate where applicable, the recommendations outlined in the Task Force on Climate-related Financial Disclosures (TCFD), covering the significant strides we have made in terms of our action on climate change around our strategy, governance, and action plan around reducing our greenhouse gas (GHG) emissions profile.

Finally, we remain committed to supporting global sustainability initiatives, and included in this report are our contributions towards achieving the United Nations Sustainable Development Goals (UN SDGs). We are also committed to supporting the national ambitions of the countries in which we do business and highlight in this report our relevant contributions.

Reporting Boundaries

All environmental and safety metrics in this report align with the operational control method of reporting, covering our operated activities in the United Arab Emirates (UAE), Indonesia, Malaysia, and Thailand. In cases where investments or divestments were made, we report within the period operatorship was held. All other data presented in this report is representative of 100% of Mubadala Energy's business, unless otherwise specified.

Independent Assurance

For this year's reporting, we have completed an independent assurance of our Scope 1 and Scope 2 GHG emissions for our operated assets (UAE, Indonesia, Malaysia) for the calendar years' 2022 and 2023. Our Thailand operated assets are not included due to the completion of divestment of these assets in Q1'2023. Our GHG emissions Reporting Criteria for Scope 1 and Scope 2 GHG emissions are also included in this year's report for reference.

Feedback Mechanisms

We welcome any comments or feedback on our 2023 Sustainability Report:

 Communications@mubadalaenergy.com

Our current and past sustainability reports can also be found on our website:  www.mubadalaenergy.com

CEO MESSAGE

“

It is with great pleasure that we launch Mubadala Energy's fifth annual sustainability report, which highlights the key sustainability issues we confront as a company, and the progress we have made over the last year in positively impacting these areas.”

Mansoor Mohamed Al Hamed

Managing Director and
Chief Executive Officer

Proud of our performance

I am immensely proud of the progress we delivered in 2023 on the material environmental, social and governance (ESG) areas we monitor and actively manage. Our strategy is now fully in motion, and we have firmly embedded the principles of the energy transition as the foundation of our business. Our portfolio exposure to gas has expanded in the last year, from 66% in 2022 to almost 69% of our overall working interest production of 369kboe/d in 2023, as we recognize the importance of gas as a low carbon solution particularly in the regions where we do business.

As we look to the future, our coverage and growth across the gas value chain is anticipated to continue, and we are pleased to have also shared updates on our recent exploration successes in countries like Indonesia. The Layaran-1 discovery in our operated assets in South Andaman which was announced in 2023 paves the way to support Indonesia's decarbonization ambitions. This focus on expanding across low carbon energy solutions permeates throughout our global portfolio of assets, as we recognize the critical importance of responsibly managing and reducing our emissions footprint, supporting our contribution to national and international climate targets.

Significant strides in our decarbonization roadmap

In the year that coincided with the UAE hosting the UNFCCC's COP28 event in Dubai, we were also able to make significant strides in reducing our emissions footprint. Last year alone, we delivered a 66% reduction in our Scope 1 and Scope 2 greenhouse gas (GHG) emissions, which takes our average GHG emissions intensity down from 35.2 kgCO₂e/boe in 2022, to an average of 15.3 kgCO₂e/boe in 2023. This is a testament to the firm focus and commitment that we have made as an organization to the responsible provision of energy.

Not only are we actively managing our global portfolio of assets, but also introducing the right interventions, whether it be technology or process optimizations, to improve our performance. In so doing, we continue to align with the climate ambitions of our shareholder, the UAE, and of the countries where we do business, contributing towards the achievement of Net Zero targets.

Collaborating to advance our energy transition strategy

Having now rolled out our energy transition strategy two years ago, last year we announced several collaborations and partnerships to help us advance our ambitions to grow in new energy arms such as geothermal energies, carbon capture, utilization and storage (CCUS), and blue hydrogen.

➔ Continues

CEO MESSAGE CONTINUED

We see partnerships in these areas as a key to success, as the scale of expansion in these areas to meaningfully impact global climate ambitions requires close collaboration by all key stakeholders – from energy producers to technology providers, regulators, policy makers, and consumers. Our energy transition efforts extend to our social contribution programs too. I am proud of the commitment we announced in 2023 to plant 700,000 mangrove trees here in Abu Dhabi over the next seven years. We have also expanded our efforts in biodiversity as key carbon sinks to other areas of our global portfolio. This important commitment, which is also part of our pledge signed with the Environmental Agency - Abu Dhabi, will contribute to the UAE's overall commitment of planting 100 million mangrove trees by 2030.

Driven by our people

The significant progress we have made along these, and other ESG areas, could not have been possible without two main priorities for our business. Firstly, an unwavering commitment to health and safety of anyone who works with us, and secondly, cultivating a team of highly dedicated and motivated employees who live the values of Mubadala Energy day-in and day-out.

In 2023, we recorded zero lost time injuries (LTI) across our entire portfolio of operated assets. In our Ruby operated gas field in Indonesia, we marked a key milestone in 2023 of zero LTIs since operations started in 2013, an impeccable 10-year record. Our team, along with the continuous support of our shareholder and Board of Directors, are the heart of our success and I extend my sincerest gratitude to all for our achievements over the last year.

2023 was a year where Mubadala Energy put its **Transformation in Action**, and we look forward to progressing our sustainability journey even further in the coming years ahead.

About Mubadala Energy

Mubadala Energy is a leading international energy company. We manage assets and operations spanning 11 countries, with a primary geographic focus on the Middle East and North Africa and Southeast Asia.

OUR PURPOSE, MISSION, VISION & VALUES

Established in 2012 as Mubadala Petroleum, in 2022 we announced a new brand direction and vision, transforming into Mubadala Energy to reflect our growing gas portfolio and expansion into low carbon solutions that are a natural extension of our core business and capabilities.

Our bold proposition reflects our strategy focused on expanding across the gas value chain and into new energy sectors to play our part in the energy transition.

We have established ourselves as a leading international energy company, managing assets and operations spanning 11 countries, with a primary geographic focus on the Middle East and North Africa (MENA) Southeast Asia (SEA), Eastern Mediterranean and Russia. With a unique, global track record of operational excellence, and a steadfast focus on sustainability and value creation, we are **Energizing the Future.**

Purpose

To leverage our strength in natural gas to produce responsible, sustainable, low-carbon energy that powers people and their communities, creates long-term value and supports the energy transition as a bridge to a lower-carbon future.

Mission

Be a resilient, international low-carbon energy company.

Vision

To be the international future energy champion for Abu Dhabi by expanding across the gas value chain and actively participating in new energy sectors for a sustainable future.

Values

As a responsible operator and partner, we drive our businesses through our values:

Integrity

We are always committed to do the right thing, the right way

Partnership

We build strong stakeholder relations and work as a team, internally and externally

Accountability

We are responsible for our actions individually and as a company

Inspiration

We continuously strive to excel in our execution

OUR GLOBAL NETWORK

Mubadala Energy is an international energy leader with operations in 11 countries. This map shows our key assets.

Average hydrocarbon split

Key

OUR STRATEGY

Rooted in the Energy Transition Focus

Driving the energy transition at the speed and scale needed to deliver on our national and international climate ambitions is a tremendously broad challenge, but one that also presents immense opportunity.

It requires the commitment of not only the wide spectrum of energy producers, but also of host governments, policy makers, technology providers and energy consumers to ensure successful and timely progress.

Mubadala Energy's focused approach to the energy transition and commitment to responsible growth underpins our delivery of long-term value creation for our shareholder, alongside our dedication to being a partner of choice within our wider stakeholder group. We are deeply committed to fulfilling our role as a sustainable energy provider in all countries where we do business.

Read more about our strategy on our website.

Informed by an extensive assessment of current and future market dynamics, our 2030 strategy is underpinned by three key realities:

- The energy transition is accelerating change within our industry, with natural gas positioned as a key bridging fuel to a lower carbon future
- ESG considerations have evolved as a major driver of investment decisions for all industries, including ours
- Our shareholder, Mubadala, has committed to accelerating progress in both areas

2030 Strategy

Building an integrated position along the gas value chain, and investing in select new energy plays that build on our core capabilities

Integrated Gas
Expanding our gas-centered business with deeper integration across the value-chain

New Energies
Exploring growth options in Blue Hydrogen, CCUS and Geothermal

People
High-performing employees with the right skills to deliver against our portfolio needs

OUR STRATEGY CONTINUED

Energy Transition & Climate Impact

We pay close attention to the risks posed by climate change to our business, and hence our strategic investment and growth pillars are based on the responsible and sustainable provision of energy.

We recognize the opportunities presented through the expansion of focus on low carbon solutions, and alignment to the UAE's Net Zero by 2050 target as well as the climate ambitions of the countries in which we do business.

As we deliver on our mission to become a resilient, low-carbon energy company, we are fully committed to reducing our Greenhouse Gas (GHG) emissions in line with international standards.

Last year was pivotal for Mubadala Energy; we doubled down on our strategic objective of growing our presence across the gas value chain, whilst exploring new energy opportunities in geothermal energy, carbon capture, utilization and storage (CCUS), and blue hydrogen. These pillars of growth within our strategy stand firmly in their contribution towards the energy transition, and our core capabilities and experience position us for expansion in these areas.

We saw the share natural gas increase in our overall working interest production in 2023, growing from 63 to 69 percent over the last three years (2021 – 2023). The divestment of mature oil assets in Thailand and ramp up of production from our operated Pegaga gas field in Malaysia's SK320, contributed to this increased gas weighting within our portfolio, and to the reduction in our overall emissions intensity. In the regions where we operate such as Southeast Asia, coal-fired power is still a major part of the energy mix, and the transition to lower-carbon fuels such as gas is critical to meeting Net Zero ambitions.

➔ Continues

The Role of Natural Gas in Decarbonizing the Energy System

Natural gas is positioned to be a key enabler of the energy transition, particularly in its role to achieve faster decarbonization through accelerating the phase-out of coal. Gas-fired power plants have the potential to reduce carbon emissions by 50 – 60 percent compared to coal-powered alternatives, whilst also generating power more efficiently. Coal-to-gas substitution can make a significant contribution in a Net-Zero roadmap, where coal in the global energy system currently accounts for around 40% of the world's energy-related GHG emissions.

Advances in renewable power also continues to make significant strides, particularly in China, the United States, and the European Union, as

highlighted by the International Energy Agency (IEA). However, the challenges of intermittency of power generation from renewable energy sources such as solar and wind, and still lacking mass scalability in battery technology translates to the need for more stable supply-sources that can bridge the gap. Gas-fired power remains a viable option.

Technological interventions also enable the decarbonization of gas, for example, through the integration of CCUS. Policy updates, collaboration across industry and value chain players, and advancements in technology have seen CCUS expanding in application across the upstream sector. Not only does it play a role in lowering the emissions footprint of gas, but also is key to blue hydrogen production.

The Role of Gas in the Energy Transition:

Coal and oil substitution

Complementary to renewable energy

Decarbonization via CCUS

Blue Hydrogen production

OUR STRATEGY CONTINUED

“In the regions where we operate such as Southeast Asia, coal-fired power is still a major part of the energy mix, and the transition to lower-carbon fuels such as gas is critical to meeting Net Zero ambitions.”

Climate risk assessment serves as a driver of our strategy updates, as we recognize the potential impacts on our long term financial and operational resilience. In our annual business planning, we consider the impact of temperature scenarios on potential changes in commodity demand and pricing. We are also working in 2024 to introduce the first Mubadala Energy Carbon Pricing Policy, which will guide our assessment of potential carbon-related taxation or revenue streams for existing assets, and new investments under consideration.

In addition to the above, as part of our comprehensive approach to mitigating our climate impact, we have integrated the recommendations of the Task Force for Climate-Related Financial Disclosures (TCFD) into our operations wherever applicable.

 For more detail, please see the Appendix.

Working Interest Production: Percent Share of Gas

SUSTAINABILITY AT MUBADALA ENERGY

Mubadala Energy first introduced our Sustainability Framework in 2020, highlighting the critical role ESG considerations make to our corporate strategy and the underlying philosophy of how we do business.

Our sustainability mission is clear and simple: We seek to connect the opportunities of the energy transition with our ambitions towards creating a positive environmental, social and economic impact.

Mubadala Energy's Sustainability Framework

This Framework rests on three pillars, which have been embedded across all functions within our organization, and are factored into our key decisions:

- **Taking Positive Environmental Action:** Taking bold steps in alignment with national and global sustainability agendas.
- **Being the Partner of Choice:** Continuously improving our sustainability performance and generating value to our stakeholders.
- **Delivering Responsible Operations:** Setting the tone from the top and integrating sustainability across every facet of our business.

Together, these pillars reflect our commitment to addressing material and relevant ESG risks that are applicable to our business, while harnessing the opportunities offered by the energy transition.

All key ESG activities we undertake as an organization are also mapped based on their alignment and contribution to the United Nations Sustainable Development Goals (UN SDGs).

For more detail, please see **page 63**.

Embedding Sustainability Throughout Our Business

In 2022, we rolled out our first Sustainability Strategy, which helped to integrate the overarching pillars of our Sustainability Framework into every facet of our business. In terms of understanding the relevant ESG focus areas for our entire portfolio, we have targeted two main foundational areas:

- 1) How do we develop, enhance and sustain **resilient operations** – this requires a continued robust focus on areas such as health and safety, the environment, people who work for and on behalf of us, and the communities we impact.

- 2) How do we identify and pursue investments in **sustainable new ventures** – this includes having the right frameworks and structures in place to support responsible investing, including a careful approach to partner selection and engagement.

The strategic enablers of these two main areas include the underlying policies, processes, and systems we have in place, our governance frameworks, an ongoing process of alignment with our key stakeholders, and ensuring that as we transition to a more sustainable business, we have a team with the right capabilities on hand to enable progress.

Sustainability Strategy

To connect the opportunities of the energy transition with our ambitions to take positive environmental action, deliver resilient operations, and to be a partner of choice.

Strategic Pillars

Resilient Operations

Sustainable New Ventures

Focus Areas

Health & Safety

Communities

MATERIAL ESG AREAS OF FOCUS

Every year we conduct a refresh of our materiality assessment to identify and review the sustainability issues of highest concern to our business and our stakeholders.

We have linked these material issues to our sustainability strategy and integrated them into our business operations. We also report on our progress transparently around these material topics through our sustainability report and other relevant publications.

For our disclosures in this report, we conducted a materiality assessment in line with GRI's Universal

Standards (2021) requirements, and also considers the European Union's Corporate Sustainability Reporting Directive (CSRD) double-materiality methodology, and other related methodologies. Our aim is to transition our current reporting process to an understanding of our impact on stakeholders (both inwards and outwards), economies, and the environments in which we operate and have influence over.

Using the process summarized below, topics relevant to our business were identified and prioritized based on their financial and non-financial impact – and the wider impact on stakeholders. This process involved benchmarking against leading standards and rating agencies (GRI, SASB, IPIECA, MSCI, S&P, Sustainalytics), as well as the topics identified by our industry peers. We took the following steps as part of this refresh process:

1.

2.

3.

4.

Understand our current sustainability context

- Review the topics considered material by relevant:
 - Peers including international, independent, and national oil companies
 - Relevant sustainability reporting standards, including GRI, SASB, IPIECA, and TCFD
 - ESG rating agencies' criteria for the oil & gas industry, including MSCI, S&P and Sustainalytics

Survey key stakeholders and review/refresh our material topics

- Engage with internal and external stakeholders through material topic impact assessment surveys
- Update the material topics based on current stakeholder assessment of priority ESG areas and considerations

Understand potential financial and non-financial impacts

- For all material topics (existing and new), identify key financial and non-financial risks and opportunities to Mubadala Energy and our stakeholders

Assess and prioritize impacts for reporting

- Analyze survey results, including additional insights garnered, against the corporate and sustainability strategy
- Consider the impact of the current material topics in relation to these strategies, to chart a potential wider refresh/update to the business direction

MATERIALITY ASSESSMENT RESULTS

Based on our latest materiality assessment survey, the updated areas of focus in relation to our sustainability framework are as follows:

These findings underscore our commitment to addressing the critical issues that impact our stakeholders and operations. These results of our materiality assessment also highlight the necessity for continuous improvement and proactive management in these areas. Moving forward, we are committed to integrating these insights into our strategic planning and operational frameworks. We firmly believe that this alignment will not only meet stakeholder expectations but also drive sustainable, long-term growth and resilience. By prioritizing these material topics, we aim to foster responsible business practices, ensuring that our operations contribute positively to the economy, environment, and wider society. Our dedication to these principles will be reflected in our ongoing reporting and action plans, reinforcing our commitment to transparency and accountability.

Key Considerations

The materiality assessment revealed several critical insights into our operations and their broader impacts. Notably, the emphasis on sustainability is increasingly paramount among stakeholders, with particular concern for issues.

Core topics:

- Climate change and GHG emissions management
- Social responsibility, and good governance practices
- Health, Safety & Security of People, and
- Governance and Business Ethics were ranked as having the highest level of significance by our internal and external stakeholders

Emerging topics:

- GHGs & Other Air Emissions
- Our Strategy, Purpose & Financial Resilience
- Climate Change & Energy Transition

Environment

Making a positive contribution

Photograph: Abdulla Alqubaisi

OUR APPROACH TO ENVIRONMENTAL ACTION

In alignment with one of the key pillars of our sustainability framework, we seek to have a positive contribution on the environment through our activities, and the nature of our industry necessitates that environmental considerations are some of the top material issues we consider.

We have a long history of conducting our business in a manner that protects and conserves the environment. Our approach to environmental protection is aligned with the UAE's firm ambitions to mitigate global climate change risks.

We have also built over many years a proven track record of complying with, and exceeding the regulatory requirements associated with our operations, utilizing technology and innovative solutions where needed to ensure we operate responsibly and efficiently.

We structure our approach to environmental action around three main areas:

Reduce

The production of greenhouse gasses and other pollutants or waste from our operations

Optimize

The consumption of energy and other natural resources such as water in our operations

Support

The conservation of biodiversity and natural habitats that may be impacted by our operations

ENVIRONMENTAL POLICIES AND STANDARDS

Every business unit within our operated portfolio of assets must execute our Operations Management System (OMS) and Environmental Management Standard (EMS), which guide our efforts towards making a purposeful environmental impact.

Together, they outline the framework for operational best practices that help us proactively identify and mitigate potential environmental risks, and cover all aspects of air pollution, waste management, water and energy use, and biodiversity impacts.

The OMS and EMS are governed by our Quality, Health, Safety, Security and Environment (QHSSE) Policy. As part of a comprehensive risk management strategy, to ensure our OMS and EMS capture the most relevant industry guidelines, it is reviewed annually and updated as required. The EMS in all our operated business units (Indonesia, Malaysia, and Thailand) are certified to ISO 14 001:2015 (Environmental Management System), ISO 9001:2015 (Quality Management System), and ISO 45001: 2018 (Occupational Health and Safety Management System) in 2023.

In addition, we also ensure compliance with country-specific requirements, and are subject to oversight from relevant regulatory bodies in the

countries where we do business. Oversight also includes periodic audits from our shareholder, to ensure that we remain aligned with international best practices.

In 2023, our Indonesia Business Unit received for a fourth consecutive year the Green rating for PROPER audit conducted by Indonesia's Ministry of Environment and Forestry (MOEF). PROPER is a mandatory audit conducted yearly by MOEF to assess environmental performance in terms of regulatory compliance in areas such as energy efficiency, emission reduction, water and wastewater reduction, hazardous and non-hazardous waste reduction, biodiversity, and community development. A Green rating indicates that the company has implemented environmental management procedures above the standards set by the Ministry.

GHG EMISSIONS

As we deliver on our mission as low-carbon energy producer, we are fully committed to reducing our GHG emissions in line with our QHSSE and ESG Policies, Operating Management System, and Environmental Management Standards.

In terms of the calculation and reporting of emissions, our internally developed GHG Calculation and Reporting Guidelines is aligned with international standards and best practice. In this year's report, we disclose our Scope 1 and 2 emissions reporting criteria in the Appendix.

We have a deep understanding of the risks posed by climate change, and we are dedicated to minimizing these risks through the implementation of our energy transition strategy that aligns closely with the sustainability agenda of our shareholder, the UAE government and the host nations in which we operate. Following the outcomes of the United Nations Framework Convention on Climate Change (UNFCCC) discussions at the 28th Conference of Parties (COP28), we continue to explore enhancements and innovations that will support the decarbonization of our operations, and investments in new energy areas that will facilitate the provision of lower carbon energy sources to the key markets in which we do business, supporting the climate targets of such countries.

Specifically in 2023, the impact of our ongoing strategy implementation and portfolio optimization efforts bore fruit, with the achievement of a 66% reduction in our Scope 1 & 2 emissions. This also translated into a 57% reduction in our Scope 1 & Scope 2 emissions intensity compared to our 2022 footprint, with a reduction from 35.2 tons kgCO₂e/boe in 2022 to 15.3 tons kgCO₂e/boe in 2023. This performance aligns us with our industry peers who are ranked top tier based on their progress in this area and leading the charge in terms of emissions management. Excluding our Thailand operated assets which were divested in early 2023, our 2022 and 2023 Scope 1 and 2 GHG emissions have been independently assured (please refer to the Appendix for the Assurance Statement).

Reduction in Scope 1 & 2 Emissions in 2023

66%

Reduction in Emissions Intensity in 2023

57%

“We have a deep understanding of the risks posed by climate change, and we are dedicated to minimizing these risks through the implementation of our energy transition strategy that aligns closely with the sustainability agenda of our shareholder (Mubadala), the UAE government and the host nations in which we operate.”

GHG EMISSIONS CONTINUED

Although our 2023 results can be partially attributed to the divestment of our Thailand operated oil positions, this performance also indicates that our innovation and enhancement projects in decarbonizing our operations across our global portfolio are making a difference. Examples of such enhancements introduced in 2023 include:

Indonesia

- Reducing the running hours of air compressor usage on our Ruby offshore platform by around 800 hours
- Installing fuel treatment devices on heat exchangers used during drilling operations, resulting in more than 20% reduction in both CO₂ and NOX emissions
- Utilizing biodiesel during drilling operations, which not only reduces our CO₂ footprint, but is also more cost effective
- Installing outdoor lighting photocells which have halved outdoor lighting requirements, reducing our energy consumption

Malaysia

- Implementing 'smart' or digital GHG measurement, monitoring and reporting on the Pegaga offshore platform which helps us to access real-time data, and accelerate interventions
- Managing flaring in strict compliance with the regulatory limits set forth in the Petronas Minimum Environmental Standards
- Exploring the use of GHG cameras and drones to measure fugitive emissions and improve reporting.

Reduction in CO₂ & NOX emissions

20%

Reduction in running hours of air compressor usage on our ruby offshore platform

800

Total GHG emissions – Scope 1&2

(tCO₂eq)

GHG emissions distributed in 2023

(tCO₂eq)

Note: the charts above include Thailand operated assets until their divestment in Q1'2023

OTHER AIR EMISSIONS

In addition to our GHG emissions, we monitor and address wider air emissions and pollutants. In the last year, we recorded a significant reduction in volatile organic compound (VOC) emissions as well as nitrogen oxide (NOX).

The reductions in VOC's and NOX, while in part due to our divestment from Thailand operations, indicate the success of the technological interventions we introduced in our operations.

Reductions in flaring and venting are two key priorities our industry continues to place emphasis on, and importantly so. In 2023, our volume of flared gas reduced by 62%, and our total venting reduced by 76%. In our Indonesia drilling operations, the installation of fuel treatment devices on heat exchangers significantly contributed to the reduction in our flaring.

In Malaysia, we continue to manage a strict flaring practice in adherence to the regulatory limits set by local authorities, ensuring that our operations meet the minimum environmental standards set forth.

Emissions by Type of Gas

Reduction in Gas Flared Within Our Operating Assets in 2023

62%

Flaring (mmscf)

Total venting (mmscf)

ENERGY CONSUMPTION

Our management practices are governed by our QHSSE Policy and Environmental Management Standards. In 2023, we implemented numerous energy efficiency and innovation initiatives, and alongside our Thailand assets' divestments, these led to a near 46% reduction in energy consumption compared to our 2022 performance.

Our direct energy consumption, which accounted for approximately 99% of our overall energy usage, totaled around 2.7 million GJ. The primary source of this consumption was diesel fuel utilized in the generators powering our offshore facilities.

Energy efficiency enhancements in our Indonesia business unit included the change-out of outdoor lighting installations, which cut the running hours of outdoor lighting systems from 24 to 12 hours. Our flexible working for employees also translates to optimized air conditioning and lighting usage in our offices. Our Malaysia office in Kuala Lumpur is partially powered by solar power, although the impact of this is not reported.

Reduction in Total Energy Consumption within our operating assets in 2023

46%

Total energy intensity (Direct + Indirect)
(GJ/mboe)

Energy Use Distribution in 2023
(GJ)

WATER MANAGEMENT

We strive to reduce our water consumption across our onshore and offshore facilities. This commitment entails identifying and implementing innovative approaches to enhance operational efficiency, while minimizing wastewater generation.

In 2023, our total freshwater consumption declined by ca. 86%, driven mainly by the exclusion of our Thailand oil assets which were divested early in the year.

An increased rate of freshwater recycling to almost 16% for the year was also the result of lower freshwater consumption. The increased drilling activities in our Indonesia business unit however contributed to an increase in seawater consumption by around 31%, and hence an increase in our overall water consumption intensity from 20.1 m³/kboe in 2022, to 32.4 m³/kboe in 2023.

We continue to deploy technologies and best practices to conserve, reuse and recycle precious water resources. For example, in our Indonesia business unit, we have launched the water clarifier injection program to remove oil from wastewater. The clarifier stimulates hydrocarbon floc growth and, in turn, enables hydrocarbon separation from wastewater. We are also reusing water from air conditioning units based on a detailed Life Cycle Assessment and adjusting laundry cycles in our facilities for greater efficiency.

In Abu Dhabi, we marked World Water Day in March with an employee campaign comprising simple water-saving tips – from buying locally and seasonally, to taking part in wetland conservation. In our Indonesia business unit, we marked four consecutive years of achieving the ‘Green’ PROPER rating by the Ministry of Environment and Forestry. These rigorous audits are conducted annually to assess environmental performance in terms of compliance (or above) on areas including wastewater reduction.

Total percentage of water recycled or reused (%)

WASTE & SPILLS MANAGEMENT

Our Waste Management System, which is ISO14001-certified, follows the guidelines set by the International Maritime Organization and complies with local regulations where applicable. This comprehensive system covers various aspects of waste management, including hazardous waste, non-hazardous waste, recyclable materials, and biological waste, across our assets, offshore facilities, offices, and warehouses.

In 2023, we had a ca. 20% reduction in overall waste generated, with a total of 442 tons. Our total waste intensity remained stable as measured by tons of waste generated per thousand barrels of oil equivalent of production. Around 3% of our total waste generated was also recycled last year.

We provide regular communication on waste and resource efficiency, including annual awareness campaigns to employees. In Abu Dhabi, for example, we have improved office recycling facilities and signage and employee awareness around the need to “reduce, reuse, recycle”, with a particular emphasis on single-use plastics. We have transitioned to recycled materials in our canteen packaging, coffee cups, sleeves and lids and printing paper.

In our Indonesia business unit, a hazardous waste reduction program focused on the used air filters in 2023 – the aim being to separate non-hazardous waste from used filters (Filter Enclosure Separation Program). The programme led to a reduction of around 0.16 of used filter waste for the year.

Across our business units, we have robust and comprehensive systems in place to prevent leakages of oil, water and other substances from our equipment and facilities. According to our reporting guidelines, we are obligated to report spills exceeding 1 barrel in volume. We are proud to report zero reportable spills to date. This is testament to the efficacy and enforcement of our QHSSE policy and Environmental Management Standards, as well as the diligence of our global workforce.

BIODIVERSITY & CONSERVATION

As most of our operations are conducted offshore, our biodiversity initiatives are primarily centered around marine conservation, scientific research, and education.

Importantly, we seek to uphold the strategic priorities outlined by the leadership of the UAE, including the Abu Dhabi Climate Change Strategy.

One prominent example is our focus on mangrove planting, which presents multiple benefits, including climate change mitigation, coastal protection, water quality improvement, and the provision of essential habitats for diverse species.

At the UNFCCC's COP27 held in Egypt, the UAE's Ministry of Climate Change and Environment (MOCCAE) announced the launch of the Mangrove Alliance for Climate (MAC), which seeks to support, enhance and expand mangrove forests globally as a nature-based solution against climate disruptions. Following this, the UAE's MOCCAE announced at the end of 2022 the target to plant 100 million mangrove trees across the country by 2030, as an important contributor to blue carbon projects.

As part of our biodiversity initiatives, we have channeled significant efforts in the last year to align and incorporate this agenda through our activities, and in 2023 we announced our first biodiversity target for the UAE of planting 700,000 mangrove trees by 2030.

In 2023 we announced our first biodiversity target for the UAE of planting 700,000 mangrove trees by 2030

Target Announced to Plant 700,000 Mangroves in the UAE by 2030

In 2023, Mubadala Energy became among the first organizations in the UAE to sign the Abu Dhabi Environment Agency's (EAD) Abu Dhabi Mangroves Initiative (ADMI) Pledge, with a commitment to plant 700,000 mangroves in Abu Dhabi by 2030, equivalent to an annual target of 100,000 trees per year until 2030.

This Pledge establishes a framework to help conserve and restore mangroves and other blue carbon ecosystems in the UAE and globally and aims to recognize the huge impact of nature-based solutions that these ecosystems provide, while helping accelerate their conservation and restoration through science-backed research and innovation. In line with this, we have started work to harness innovative drone and mapping technology to ensure the most effective planting program.

BIODIVERSITY & CONSERVATION CONTINUED

Greenhouse Development Project in Indonesia To Support Endangered Species Preservation

In 2022, our Indonesia business unit commenced the construction of a green-house project in one of our local community areas (Hilir Muara village). This project will serve as a nursery area for Kalimantan's endemic and endangered plant species such as *Mangifera Casturi* and the *Durio Dulcis*. The project will also support planting of several crops with economic value with hydroponic system (due to limited land space) that is targeted to improve the welfare of local communities.

The construction was completed in 2022 and it is fully operated by community by mid-2023. This program has increased the biodiversity index within the Hilir Muara Village, and successfully supports growth of 27 plant species, with three of these species being native Kalimantan region and with endangered or vulnerable status from International Union for Conservation of Nature (IUCN).

BIODIVERSITY & CONSERVATION CONTINUED

Receiving Indonesia's Green PROPER Rating For the Fourth Consecutive Year

In Indonesia, Mubadala Energy has achieved in 2023 the coveted PROPER Green Rating for a fourth consecutive year. The Program for Pollution Control, Evaluation and Rating (PROPER) is a mandatory audit conducted each year by the Indonesian Ministry of Environment and Forestry. It assesses environmental performance and compliance with regulatory requirements, including energy efficiency, reductions in emissions, water and waste, biodiversity, and community development.

The program is built on the premise that public disclosure and accountability, transparency in operations, and community participation will foster more sustainable practices by organizations to achieve effective and sustained pollution control. In 2023, we have exceeded the required standards with multiple initiatives that we have delivered, some examples of which include:

- Emissions reduction via the use of lower emitting fuels in our operations processes
- Energy efficiency enhancements via installation of more efficient lighting systems
- Waste management via the use of Filter Enclosure Separation program to reduce hazardous waste
- Water management via the Water Clarifier Injection Program which reduces produced waste-water load to the sea
- Biodiversity projects such as infrastructure development to support the regeneration of endemic and endangered plants

We remain committed to maintaining this outstanding rating.

Social

Putting people at the heart of everything we do

HEALTH, SAFETY & SECURITY OF OUR PEOPLE

Safety is Our Top Priority

Embedded in our DNA as a company is our unwavering commitment to safeguarding the wellbeing and safety of everyone who conducts work on our behalf, including our employees and contractors.

This commitment exists at every level of our organization and has allowed us to maintain our top-quartile safety performance which we continue to receive recognition for across our industry.

It Starts with Our Culture

Our safety culture is built on the approach of anticipating, preparing, and preventing, with the primary goal of eliminating any operational incidents. This mandates that potential risks must be identified, controlled, and mitigated at the outset of every operation, with this proactive risk management approach creating a safer working environment for everyone.

Governed by our Quality, Health, Safety, Security and Environment (QHSSE) Policy, our safety culture empowers every member of our team, including

contractors, to stop operations if they notice any safety concerns. Our Vision Zero Safety Campaign is reinforced by our ultimate **objective is to ensure a daily record of zero recordable incidents**, and we believe that cooperation and continuous learning are key to achieving this goal.

Our top priority is to continuously enhance our safety performance yearly. **In 2023, we recorded 3.22 million working hours** completed by our employees and contractors, with a consistent record of zero fatalities across all our areas of operations, and we remain steadfast in ensuring this important safety record is maintained.

In addition, we had a **total recordable injury rate (TRIR), and a lost-time injury rate (LTIR) of zero** across all our operated assets in 2023, an achievement we are immensely proud to report.

Specifically, in our Ruby operations in Indonesia, we have celebrated in 2023 ten years of zero LTI, spanning the period of the beginning of the field's operations to current date. Also, in our Pegaga operations in Malaysia, the end of 2023 marked two years without LTI.

Through our performance over the years, we recognize that, given the nature of our operations, how we conduct the engagement and onboarding of our contractors remains key to ensuring our safety culture is upheld. We thoroughly investigate every safety incident and conduct root cause analyses to identify any underlying causes to help enhance our performance in the future. We also implement effective measures to mitigate future risks and prevent similar incidents from occurring.

HSSE Committees & Employee Engagement

Everyone who works for Mubadala Energy, including contractors, has a role to play in ensuring occupational health and safety by identifying hazards, eliminating, or minimizing associated risks. This responsibility can be enhanced through continuous engagement and consultation.

To support this, we have established **HSSE Committees** in every business unit to ensure adequate communication, engagement, involvement, and consultation with Mubadala Energy employees concerning Occupational Health & Safety issues. In 2022, we introduced the Mubadala Energy HSSE Committee Guidelines to provide a standardized approach for these Committees to perform their role. The Committees meet monthly to evaluate our HSSE programs and any potential areas for improvement.

Employee engagement is also achieved through:

Pre-Mobilization HSSE Induction

Involves conducting comprehensive HSSE induction sessions for all personnel prior to mobilizing for any work activities.

HSSE Champion Program

Encourages proactive involvement from all personnel in communicating HSSE matters within their departments.

'Vision Zero' Campaign

Employee awareness building campaign built on the overarching goal of achieving zero harm in the workplace.

Safety Culture Survey

Conducted as a mechanism to gather feedback from all our employees on areas where we can improve.

Cross Audits

HSSE members of individual business units can audit their counterparts and share ideas on areas of improvement.

HSSE Stand-Down Sessions

These sessions are conducted following incidents, near misses, or significant operational events to extract valuable lessons and insights.

HEALTH, SAFETY & SECURITY OF OUR PEOPLE CONTINUED

Health & Safety Training

Significant investment is made by ensuring a system of continuous training to increase the awareness of our employees and contractors while instilling a standardized safety culture across our network. In 2023, a total of 6,516 training hours were delivered to 587 of our employees and contractors across our global network, covering mandatory Health & Safety training.

This represents a 15% increase vs. 2022 in terms of hours of training provided.

Hours of Health & Safety Training Delivered in 2023

>6,500

Building Alignment with Our Contractors

Considering our contractors are an integral part of our safety culture, we have established a HSSE Contractor Management Standard to set out the rules and regulations that our contractors must comply with. Each of our operating assets has Contractor Management Procedures in place that align with this standard.

To ensure compliance, we conduct regular monitoring and audits, including pre-mobilization audits. Contractors are evaluated based on the level of risk they pose. Therefore, high risk contracts undergo more rigorous checks, such as pre-qualification reviews and ongoing evaluations with contractor representatives, followed by final evaluation to close out.

Quarterly meetings are also held with key contractors to review HSSE performance and KPI achievement. Enforcement of HSSE requirements is monitored locally and through HSSE audits on-site and at contractor's yards. Final evaluation and close-out are also mandatory for high HSSE consequence contractors.

In 2023, all contractors contributed to Mubadala Energy's achievement of an exceptional safety record.

Key Requirements of the HSSE Contractor Management Standard

Emergency Preparedness

The scale and dispersion of our operations globally mean we must always be ready to respond to a range of potential disruptions. In 2023, a total of 113 emergency preparedness drills were conducted across all our business units. These simulations and activities covered various scenarios aimed at enhancing our operational readiness and letting us identify training opportunities that support stakeholder alignment and participation.

Our Global Resilience Team (GRT) is an internal resource group which develops, manages and executes high quality emergency, crisis and business continuity exercises for Mubadala Energy as required by the company's Resilience Standard and the UAE's National Emergency Crisis and Disasters Management Authority (NCEMA) requirements. Where required, we also work with third parties to execute emergency drills and to identify opportunities for training of our staff.

Each of our business units has an Annual Drill and Exercise Program in place. In the last year, drills covered scenarios such as operational interruptions or shutdowns, executing repair procedures to our facilities, response to potential disasters such as fires, etc. In some instances, we conduct integrated exercises with our contractors, and other relevant stakeholders.

Emergency Response Drills Conducted

113

HEALTH, SAFETY & SECURITY OF OUR PEOPLE CONTINUED

Prioritizing Occupational Health

We take a proactive approach to engaging with our teams on issues of health. For 2023, this included our collaboration with Mediclinic in Abu Dhabi to conduct health screening of our employees, along with knowledge talks on areas such as ergonomics and at-desk activities that can promote good health.

Occupational safety campaigns in our Indonesia business unit included injury prevention at sites, and the delivery of our internally-developed 'Take HEARRT' training - Hazard Elimination and Risk Reduction Training - for new hired and drilling contractors to support our drilling campaign in our North Sumatra exploration licenses which were conducted in 2023.

We also held in Indonesia a health promotion campaign focused on cardiovascular disease prevention and risk reduction, through the hosting of health talks, focus group discussion, etc. To support this initiative, we held for staff a 20-week fitness challenge program. Our physical activity events participation rate stood at almost 40% of our staff in the business unit, with the average active time per week recorded at 150 minutes. Our HRA (Health Risk Assessment) was also updated in 2023 and covers the Jakarta and Balikpapan offices, Ruby fields, and Balikpapan shore-base.

OUR EMPLOYEES

People are our Greatest Asset

In the face of the energy transition, we recognize that delivering our strategy depends on cultivating a highly skilled and motivated workforce that can help drive innovation and progress at the scale and pace needed to make a material, and positive impact.

Together, as one global team, we translate the company's vision into tangible results. We strive to maintain a dynamic, inclusive, and nurturing culture where everyone feels valued and respected.

In 2023, our rate of new hires stood at 12% (double that of 2022). We are committed to recruiting and retaining the right people for the right roles to enable them to perform their jobs effectively and progress in their careers, while ensuring our preparedness for the future. To this end, our Human Capital department implements policies and programs to support fulfilling careers while maintaining a healthy work-life balance.

Leading Employment Practices

We provide competitive reward and compensation packages, along with a wide array of benefits, including flexible working arrangements, parental leave (for men and women), remote working options, exceptional leave policies, seniority

awards, mental and physical health support, and Employee Assistance Programs. We nurture employee engagement through further initiatives, such as fitness challenges, Knowledge Café sessions, Town Halls, and Q&As with the leadership team.

In 2023, we launched an integrated training calendar, learning management system and an Employee Day to boost our engagement with all members of staff. We are also enhancing our employee interface with our Human Capital team through the wide-scale implementation of digital tools that make alignment with human capital policies and expectations more efficient.

To support continuous professional growth, we have integrated Individual Performance Criteria (IPC) and Individual Development Plans (IDP) into our performance management processes. 100% of our employees have received performance evaluations in 2023.

With future talent attraction and development in mind, we have several partnerships with academic institutions, and support collaboration particularly on energy transition and sustainability-related areas. In February 2023, we participated in the Industry & Academia Sustainability Dialogues 2023 held at New York University Abu Dhabi (NYUAD). Industry representatives at the event, which included our Head of Energy Transition & Decarbonization, took the opportunity to engage with students around the theme energy transition, and share knowledge on what is required for enhancement of a sustainable energy industry.

We also use the opportunity to collaborate with other leading companies in our industry to share knowledge on sustainability areas. This includes a knowledge sharing workshop held with a wide range of colleagues from Pertamina Persero to discuss ESG and energy transition, digitalization, strategic pivots, etc.

OUR EMPLOYEES CONTINUED

Diversity & Inclusion

With 31 nationalities across our organization, establishing and sustaining a work environment where everyone has an equal opportunity to representation and engagement with the provision of safety and respect is an unwavering commitment to diversity and non-discrimination. We have a zero-tolerance policy for any form of discrimination or harassment in the workplace. We support the ongoing development of all our employees, regardless of gender, age or ethnicity.

While we continue to support women's empowerment through relevant clubs, committees, and by providing the required development opportunities to enable them to make progress in their careers, we also support the progression of female leaders within the organization. In 2023, 27% of our staff were females, with 17% holding middle management positions, and 7% of senior management positions being held by women. We continue to benchmark our performance in relation to our peers, and our results position us within our industry averages.

Nationalities Represented Across Our Organization

31

Mubadala Energy also provides a supportive parental leave policy for both male and female employees (via maternity and paternity leave) across all our business units, which is on par or better than the local regulations and practices in each applicable country. Consistently since this metric was introduced in 2019, annually we have a 100% return to work rate, and a 100% employee retention rate for members of staff who availed this.

Gender Distribution in 2023

(%)

Age Distribution in 2023

Leadership Excellence for Women Awards & Symposium

As the energy industry undergoes a transformative phase, we want to be at the forefront, championing diversity, innovation, and sustainability. To this end, in 2023 we sponsored the Leadership Excellence for Women Awards & Symposium (LEWAS) which was held in Al Khobar, Saudi Arabia. The high-profile event featured some of our leading females and UAE national staff: Salma Al Hajeri, Haila Al Rejaibi, Fatima Al Ameri, Shamsa Al Shamsi, Mariam Baslaib and Muzna Al Rahbi. As moderators and panelists, their contribution was not only motivational to other women in business, but it also sought to inspire younger generations to become "trailblazers in energy", to drive positive change in the energy sector and beyond.

OUR EMPLOYEES CONTINUED

Talent Building & Retention

Being a Partner of Choice includes building a sustainable and progressive relationship with our staff. We conduct an annual employee engagement survey to have an open and transparent feedback mechanism of engaging with all members of the organization, in 2023, we recorded the year of highest engagement, with 92% of staff completing the survey. Areas of strength which were cited included communication, safety, diversity and inclusion and brand perception.

We prioritize the education and professional growth of our staff, aiming to foster a competent workforce that shares our unique values and aspirations for expansion. Our company places a strong emphasis on employee training and development, with a comprehensive system that includes ongoing reviews and discussion of each employee's development needs. We have also embedded the Mubadala Energy Value and Core Competency Framework in our hiring processes, talent development and performance management processes. The company also encourages the following development approach a) On-The-Job Training (OJT) and b) Coaching & Mentoring. This is to ensure that development effectiveness is also managed.

We conduct an annual talent management process that involves talent reviews, mapping, and succession planning to develop future leaders for our evolving business needs. We also have a Young Engineers Program designed for new graduates that combines on-the-job and classroom training over two years, with a focus on developing technical and core competency skills to help them succeed in their careers. In 2023, employees received an average of nearly 8 days of training. Courses which were administered across our business units in 2023 ranged from leadership skills, change management and financial wellbeing, to GHG measurement, waste management and energy transition topics.

To enhance our environmental risk management approach, some of the courses we offered in 2023 to staff include, but are not limited to the following:

- Advanced GHG Calculations;
- Radiation Protection Conference & Workshop,
- Schedule Waste Management (Basic),
- Certified Environmental Professional in Scheduled Waste Management (CePSWAM),
- Life Cycle Assessment,
- HSSE leadership training,
- Green Proper Training,
- Supervisory Skills and Leadership for Operations,
- Managing the Risk with COSHH,
- Carbon Capture Sequestration & Hydrogen and Energy Transition

Employee engagement rate through surveys (%)

Average training days per employee (days/employees)

OUR EMPLOYEES CONTINUED

National Talent Enhancement

In line with UN SDG 8 (Decent Work and Economic Growth), we promote nationalization efforts throughout our portfolio of business units by giving priority to hiring suitable nationals for job openings. We also collaborate closely with businesses to ensure that our employees have the most advanced training. In 2023, our national representation rate was 89% across all operations and offices, and over the last 5 years, we have managed to maintain this statistic at over 85%. Nationals in senior management positions rose to 68%, vs. the previous year's 57%. In 2023, we were also the recipient of the PETRONAS Malaysia Upstream Awards in Talent Management Excellence Silver Award for our achievements in Malaysianization.

Upholding Human Rights

We outline our commitments to human rights through various policies and procedures including the Mubadala Code of Ethics and Business Partner Code of Conduct both of which we comply with, where we also require our suppliers and contractors to abide by specific human rights principles. These policies have helped us understand the regions we operate in more comprehensively, especially through the identification of security related human rights risks.

On the issues of child or forced labor, our hiring, contractor engagement, and supply chain policies ensure full compliance with all relevant laws and regulations that are applicable to each country where we do business. Our recruitment and hiring practices include transparent and proactive screening to prevent any risk of child labor. This includes comprehensive recruitment processes, age verification measures, and ongoing monitoring to ensure that all individuals involved in our operations are of legal working age. Learn more about human rights due diligence in our supply chain on page 55.

We provide a formal grievance mechanism for employees to raise complaints in every location, which is made clear in the Employee Handbook. Moreover, both internal and external parties can contact our Legal, Governance and Compliance Unit, or the Mubadala Ethics Helpline if they have any concerns over breaches of ethical standards. We also invite internal and external stakeholders to reach out to our Mubadala Group Ethics and Compliance team in case they observe or face any violations of ethics and compliance or workplace policies.

At Mubadala Energy, there were zero reported grievances in 2023. This is testament to the range of measures we implement to prevent and manage discrimination at the workplace, including the Employee Handbook, the Mubadala Code of Ethics, and the Annual Code of Ethics induction and refresher training and certification programme, which is mandatory for all employees. Learn more about the Mubadala Code of Ethics on page 50.

CONTRIBUTING TO COMMUNITIES & SOCIETY

Our Social Contributions

Our goal is to make a positive and lasting impact for our shareholder, society, and the environment by acting as a responsible citizen in the communities where we do business.

Through our Corporate Social Responsibility (CSR) strategy, we drive focused projects across four main strategic priorities: Environment, Employee Engagement, Education, and Community Development. Our Community Investment Policy was updated in 2023 to fully reflect these priorities.

In 2023, we invested more than AED 2 million to support 26 CSR projects in UAE, Malaysia and Indonesia, reaching over 58,000 beneficiaries. 2023 was a hallmark year for Mubadala Energy, as this was declared as the 'Year of Sustainability' by the leadership of the UAE, and the year in which the UNFCCC's COP28 was held in Dubai. Therefore, in line with the four pillars of our CSR Framework, we expanded our environmental and sustainability investments with a particular focus on mangrove conservation and protection, an important nature-based lever in decarbonization efforts.

Employee engagement in CSR continued in 2023, with a range of activities and projects conducted across our global operations. Overall, 60 employee volunteers gave over 330 hours to local community causes.

Change in support of UN SDGs

Real improvements in people's lives aligned to Mubadala Energy's Sustainability Strategy

CONTRIBUTING TO COMMUNITIES & SOCIETY CONTINUED

Prioritizing Our CSR Focus Areas

CSR projects must create meaningful and sustainable change that improves people's lives.

To ensure this, we carefully oversee all projects, planning to execution and evaluation:

1.

2.

3.

Planning & Selection:

We identify projects that align with our strategic vision and involve actively engaging with stakeholders through diverse channels.

We conduct rigorous Ethics and Compliance due diligence. We engage third-party experts to craft a detailed roadmap for action.

Implementation:

We regularly review progress to ensure quality and effectiveness and we evaluate key projects' impact on local communities, considering stakeholder satisfaction and other factors such as the number of beneficiaries supported.

Embedding:

We institutionalize successful projects and communicate to stakeholders and communities.

Each business unit follows a distinct process to measure impact against the UN SDGs. We also conduct an annual review process to ensure that projects remain aligned with the evolving needs and aspirations of the communities we serve. In 2023, we established a stakeholder engagement procedure and stakeholder grievance process. In some instances, we work closely with Non-Governmental Organizations (NGOs) to identify the most vulnerable communities in targeted areas. Once we obtain internal approvals for our CSR initiatives, we outline the scope of

responsibilities between our relevant business unit, and the selected NGO. Each unit's communications team will work closely with the chosen NGO to receive regular updates in a timely manner until the project's completion. To ensure project effectiveness, we have initiated an additional layer of project assurance by conducting a post-CSR project visit to ensure that all investments were channeled to the identified group of communities. We also conduct a post-project impact assessment to ensure we have achieved the targets for each programme.

CONTRIBUTING TO COMMUNITIES & SOCIETY CONTINUED

UAE's Year of Sustainability - Environment

With 2023 being marked as the Year of Sustainability by the leadership of the UAE, we focused particularly on environmental projects. We announced our first biodiversity target in October 2023 – with a commitment to plant 700,000 mangrove trees in Abu Dhabi over the next 7 years, in line with the UAE's overall target of planting 100 million mangroves by 2030. We began to forge new partnerships to enhance our impact, such as our partnership with Distant Imagery, a UAE-based company specializing in using drone technology to map and plant mangroves.

We continued to support other tree-planting initiatives, as well as the creation of artificial reefs, turtle/sea crab protection projects, waste management schemes, and educational programs focused on environmental conservation and climate impact. Additionally, we also provided support for programs that aim to improve the use of renewable energy in the communities we serve. And we expanded our environmental conservation work through beach clean-ups and educational presentations at Abu Dhabi schools.

Sustainable Agricultural Development (Indonesia)

In Indonesia, we have been working to help communities in Kotabaru build knowledge around sustainable environmental practices for the last five years. In this region, pressures on land and marine resources are threatening ecosystems and exacerbating food insecurity. The multistakeholder Ecogreen program trains and supports women and young people to cultivate nutritional vegetables in their own homes.

Impacting 20 households in 2022, the program now involves 50 households across eight neighborhoods (mainly fishing communities) and includes hydroponic planting and a nursery for endemic and endangered plants, including three endangered species on the International Union for the Conservation of Nature's (IUCN) Red List of threatened species. Ecogreen has also reduced waste by avoiding consumption of packaged, process foods.

CONTRIBUTING TO COMMUNITIES & SOCIETY CONTINUED

Education

We provide support for various educational initiatives, which include offering scholarships to financially disadvantaged students, organizing skills training programs, and making improvements to school facilities in Indonesia, Malaysia, and Abu Dhabi.

Giving University Students Unique Exposure (Malaysia)

Our CSR partnerships in Malaysia include efforts to support the local communities in Sarawak in the enhancement of social well-being and development. In 2023, we sponsored four postgraduate students from Malaysia's Asia School of Business to conduct a CSR market survey in Bintulu, Sarawak. The purpose of

the survey was to study and explore potential community initiatives that we can implement in Malaysia based on thorough research and engagement with Bintulu's community, taking into consideration the community demographic and social-economic activities.

This "action learning" sought to gain a deeper understanding of local socioeconomic

challenges and identify potential assistance opportunities. Through collaborations with world class universities, we aim to provide students with strategic insights into the CSR investment landscape where we operate, while sharpening our own stakeholder mapping to determine future community investments and help build deeper connections with the local community.

CONTRIBUTING TO COMMUNITIES & SOCIETY CONTINUED

Community Development

We collaborate with local stakeholders, including community groups, NGOs, and local authorities, to provide financial and non-financial support. In this way, we gain a clear understanding of the needs of the local communities so that we can provide assistance that is meaningful and sustainable.

Tackling Childhood Nutrition (Indonesia)

Among the nine CSR Projects we operate in Indonesia is a program to tackle malnutrition and stunted growth in children – a tragic reality affecting some toddlers of underprivileged families in the Kotabaru region of South Kalimantan.

According to the World Health Organization, the most effective intervention is to support breastfeeding in the first six months of life, and thereafter to help children consume healthy, high-quality nutrient-rich foods.

Our program not only provides nutritional food and supplements to at-risk children, but it mentors parents to provide the best start in life. In just 90 days of this intervention, the results can be seen in childhood weight and height development – with children gaining up to 5cm in height and 1 kilogram in weight. What's more, their nutrient consumption nears the median number for children of the same age group.

Funding Food and Medical Equipment (Malaysia)

In 2023, our Malaysian office sponsored new medical equipment for the pediatric ward at Bintulu Hospital in Sarawak. The new equipment will assist doctors and medical staff to more accurately monitor vital signs and administer medication for children diagnosed with cancer. We have also sponsored the hospital's playground refurbishment and donated five air purifier units to the Sarawak Children's Cancer Society halfway home in Kuching.

Meanwhile, in conjunction with Malaysia's 66th Independence Day, we supported food aid distribution to 450 underprivileged families in the Sarawak districts of Kuching, Bintulu, Miri, and Sibü. Priority was given to low-income, single mothers caring for young children, the sick, elderly, and differently-abled communities, regardless of their background, race, and ethnicity.

CONTRIBUTING TO COMMUNITIES & SOCIETY CONTINUED

Supporting 10,000 community members in Malaysia through “Beyond2020”

Mubadala Energy is proud to be one of the founding partners in the Beyond2020 humanitarian initiative, which was launched by the Zayed Sustainability Prize in 2019, with the aim of furthering the humanitarian legacy of the UAE's Founding Father, Sheikh Zayed bin Sultan Al Nahyan, by providing sustainable technologies and solutions to vulnerable communities around the world.

Malaysia marks the 17th deployment of the initiative, which provided improved access to clean water for 10,000 community members in Sabah and Sarawak regions of Malaysia, along the Rajang River. The people there have traditionally relied on surface water from the river for drinking and subsistence. Without the proper technology and systems to treat the water, villagers often experienced health issues. The solution was designed by Watroam, the 2022 Zayed Sustainability Prize winner in the Water category, who implemented sustainable water fountains in 25 rural Malaysian villages to provide clean, safe water, reducing waterborne illnesses.

CONTRIBUTING TO COMMUNITIES & SOCIETY CONTINUED

Awards Received in 2023

CSR Excellence Award (Indonesia):

In 2023, we were awarded the CSR Excellence Award by SKK Migas's Northern Sumatra Representative in Indonesia for our contributions in the Aceh region since 2019. These initiatives include the provision of radio assistance for local fishermen, stunting prevention programs, the construction of educational facilities, mangrove planting, and providing basic food packages to underprivileged communities during Ramadan. These initiatives have benefited over 5,000 individuals in five districts of Aceh, namely Lhokseumawe, North Aceh, Bireuen, Pidie, and Pidie Jaya.

Public Relations Indonesia Awards (Indonesia):

We were also awarded the Public Relations Indonesia Awards (PRIA), organized by PR Indonesia Group for supplying Fish Aggregating Devices (FADs) to support local fishing communities in Majene Regency, West Sulawesi. It was noted that the deployment program was particularly effective in driving sustainable, long-term impact by combining education, environmental awareness, and socio-economic impact to enable community development.

Transform Awards (Abu Dhabi):

Following the launch of our new brand identity in 2022, last year we were recognized by the prestigious Transform Awards for the best 'visual identity from the energy and utilities sector' with the Gold Award. The project also picked up the Bronze gong for the 'best brand evolution'. This evolution signaled not only a fresh visual look and feel, but also represented a strategic shift for the company with its renewed focus on playing a proactive role in the energy transition.

Governance

Sustaining the right framework

OUR GOVERNANCE APPROACH

We believe that transparent and ethical governance practices are essential to ensuring business stability and continuity, whilst maintaining our value proposition. As a wholly owned subsidiary of Mubadala, we have a clearly defined governance structure, and where applicable, we adhere to the policies of our shareholder to ensure the highest standards are upheld without compromising our commitment to integrity and applicable laws.

Establishing and enforcing clear governance frameworks and policies underpins our sustainability ambitions to be a partner of choice, wherein we embed transparency, ethical practices, and fairness into all our activities.

The scale and nature of our business and the contribution we make to our shareholder's value proposition necessitates that the relationship between Mubadala Energy and our shareholder is clearly defined. A Delegation of Authority defines the authority granted to Mubadala Energy by our shareholder to execute our strategy, including new investments, and progression of projects. In terms of our governance structure, the Board of Directors (Board) appointed by our shareholder provides the direction and oversight on the strategic priorities for our business, and guides our performance based on the implementation of these priorities.

Mubadala Energy's Chief Executive Officer (CEO) is accountable to the Board for all aspects of the company's business, including its governance. The Executive Committee (ExCom), established by the Board of Directors, is entrusted with certain delegated authority and responsibilities which include the preparation of our strategic plan, providing risk oversight and setting the ethical 'tone on the top'.

Governance structure

OUR GOVERNANCE APPROACH CONTINUED

Board of Directors

Mubadala Energy's highest decision-making body, the Board of Directors (Board), holds the overarching responsibility for the overall conduct of our business. The Board is dedicated to promoting responsible and sustainable value creation business activities that align with our shareholder's ambitions and the interests of our key stakeholders.

With their extensive and deep experience, our board members bring context and focus to relevant sustainability issues and hold leadership and senior advisory roles across the international energy, and investment sectors, represented by current and past senior executives from Mubadala Investment Company, and CEP SA. Members of the Board are appointed directly by Mubadala Energy's shareholder, and a periodic evaluation is conducted by our shareholder to ensure the right expertise is in place for overseeing, among other things, the prudent management of sustainability and ESG considerations, and their associated impacts.

In terms of diversity metrics, we have representation of both male and female industry leaders on the Board, and the percentage of independent Board members has almost doubled over the last three years. The diverse international expertise and skillsets of our Board provides the right focus and engagement on how Mubadala

Energy can adopt and integrate leading industry practices within our business and help to shape our strategic focus, in line with the shareholder's priorities.

Regular Board meetings were held throughout 2023, wherein sustainability-related issues are discussed. The Board has the purview of our progress on implementing the Mubadala Energy sustainability strategy, which was launched in 2022. Furthermore, ESG due diligence conducted for our portfolio optimization activities, which include new investments or divestiture decisions, are presented to the Board. In 2024, we are working towards institutionalizing this ESG due diligence process within our Investment Lifecycle process. We also actively strive to engage with our Board members on our sustainability reporting. Aligned with this, our Board members were engaged April 2024 in the annual refresh of our Materiality Assessment (see page 15 for the results).

OUR GOVERNANCE APPROACH CONTINUED

Executive Committee

The Executive Committee (ExCom) which is established by the Board, holds the mandate to provide leadership to Mubadala Energy along with overseeing the management of the organization in accordance with our Delegation of Authority. This mandate includes reviewing all proposed new projects and investments across the portfolio to ensure that they are compliant with Mubadala Energy's investment guidelines, which are aligned with the company's strategy and sustainability objectives as approved by the Board.

The ExCom also provides to our Board, as relevant, regular updates on our sustainability strategy and progress on its implementation, ESG performance across key indicators, ESG due diligence assessments for key investment milestones, and updates on key sustainability initiatives, in addition to other areas.

OUR GOVERNANCE APPROACH CONTINUED

Sustainability Governance

A dedicated Sustainability arm has been established within our organization to support the institutionalization of ESG-related principles across our business. This team resides within the Energy Transition and Decarbonization Function, a major contributor to delivering on the transformation objectives of the organization in its journey towards expansion as a low carbon global energy leader. Some of the key responsibilities of this team include:

- Oversight of Mubadala Energy's sustainability initiatives established in alignment with the company's ESG Policy.
- Provision of recommendations to the Board, ExCom, and other relevant decision makers on key ESG priorities for the business based on leading industry and other global trends and best practices.
- Updating the sustainability strategy in line with progressions in global and industry trends, such that these guiding documents are relevant and effective.
- Ensuring the transparent and comprehensive performance assessment of the business across key industry relevant ESG metrics that will guide decision making.
- Embedding a culture of sustainability across the organization through engagement, training, and advisory support to all relevant internal stakeholders.

- Supporting internal stakeholders across the organization in key investment decision gates with relevant guidance, and where applicable, ESG due diligence – these investment gates include the evaluation of potential entry into new projects and partnerships in line with the delivery of our Board-approved corporate strategy.

Other Relevant Committees

Business practices grounded in sustainability require the alignment and input of every member of our organization, and with this recognition, we have established relevant committees within key functional areas across the organization that impact, and guide decisions related to environmental, social, and economic priorities. Some examples include:

Emissions Management Committee:

As an example of one such guiding body, with climate impact being key material topic for our business we have established an Emissions Management Committee, comprising of leaders from critical functional areas within our business who coordinate and direct initiatives focused on exploring opportunities for GHG emissions reduction and optimization across the Mubadala Energy portfolio. Through their expertise and collaboration, the Committee generates recommendations for the executive leadership team, aiding in the continuous development of our decarbonization roadmap.

HSSE Committee: Another example is that we have established in every business unit HSSE Committees to ensure adequate communication, engagement, involvement, and consultation with Mubadala Energy employees concerning occupational health & safety issues. The Mubadala Energy HSSE Committee Guidelines provide a standardized approach for these Committees to

perform their role. Employee engagement is also achieved through our HSSE Champion program which encourages proactive involvement from all personnel in communicating HSSE matters within their departments. We also conduct our Safety Culture Survey as a mechanism to gather feedback from our employees on areas where we can improve.

ETHICS & COMPLIANCE

We are committed to upholding the highest standards of business conduct, and to operating our business responsibly and in line with the values we stand by, i.e., Integrity, Partnership, Accountability, and Inspiration. These values are deeply embedded in our culture and lived out through our daily interactions.

Codes and Policies

As a fully owned subsidiary of Mubadala, we abide by our shareholder's Code of Ethics and Business Partner Code of Conduct, which outline the baseline standards of professional behavior, and enable us to carry out our mandate without compromising our integrity or compliance with applicable laws and regulations. We believe that clear frameworks and policies must be upheld and enforced by everyone who works for, or with our company, including our business partners. This is the foundation for our Ethics and Compliance Program, which has received ISO 37001 certification.

- **Code of Ethics:** sets forward the foundational principles, standards and behaviors required to achieve our ambitions and uphold our values. It goes beyond baseline compliance with regulatory requirements to reflect our endeavor to operate at the highest levels of integrity and business conduct.

- **Business Partner Code of Conduct:** sets forth the minimum expectations for the conduct of our business partners who are engaging in work for, or on behalf of Mubadala Energy, whether they may be contractors, subcontractors, consultants, etc.

- **Anti-bribery and Corruption Policy:** underpins our commitment against all forms of bribery and corruption and regulates the offering and receiving of gifts, entertainment, sponsorship, and hospitality from and to our personnel.

- **Conflict of Interest Policy:** stipulates disclosure requirements for specific situations of conflict of interest whereby employees are required to proactively disclose such instances for resolution and management.

- **Personal Trading Policy:** provides guidance to employees in recognizing market misconduct, how to avoid it, how and when to complete required disclosures related to personal Securities trading activities

- **International Trade Controls:** sets the framework for understanding the legal and regulatory requirements applicable to international trade transactions.

- **Data Privacy:** sets minimum expectations to ensure that we adopt good practices when handling personal and private data.

To learn more about these policies, please visit here

 www.mubadalaenergy.com

Every year, we carry out employee training in the Code of Ethics and deliver risk-based training and engagement sessions to specific groups, as well as through employee town-halls. In our Malaysia and Indonesia operations, we also conduct an annual Southeast Asia Ethics and Compliance Roadshow. In 2023, 100% of employees completed annual online training and refresher course, demonstrating our unwavering commitment to upholding our values and instilling them in our culture. Senior management receives the same training as employees, but also receives one-to-one engagement on ethical leadership topics.

ETHICS & COMPLIANCE CONTINUED

A Culture of Transparency & Engagement

Mubadala Energy's reporting and feedback system includes a dedicated and confidential Ethics and Compliance Helpline that is open to employees and external parties. Reporting is confidential and is protected against retaliation in accordance with the Code of Ethics. Additionally, we have a dedicated Compliance Counsel, along with an established Ethics & Compliance Champions Network across our business units with whom employees can raise any issues or concerns they may have.

Employee engagement in such a critical area as our Ethics and Compliance Program is key. Therefore, we also conduct an annual ethics and compliance survey across the entire business, with required actions developed based on the results. These findings and actions are communicated to leadership and a periodic status update is provided. The 2023 survey recorded a 100% completion rate of this survey across our entire business.

Incidents of non-compliance with applicable laws and regulations in 2023

Staff completed our Ethics and Compliance Survey in 2023

100%

Anti-Corruption & Fraud

Our Ethics & Compliance Program addresses various anti-bribery and corruption risks, the assessment of which is an essential part of our annual risk management process. Most of our risks such as gifts, entertainment, hospitality, and sponsorships are managed under the Anti-bribery and Corruption Policy, Conflict of Interest Policy and our Code of Ethics.

We conduct risk-based due diligence on existing and prospective business partners by using technology and best practices. This includes screening with questionnaires. We assess the relevant frameworks of our business partners on a case-by-case basis and work with them to

ensure the highest standards, and determine the appropriate action, as needed. In 2023, 100% of our operations were assessed for risks related to corruption and the successful enforcement of our policies have ensured that there were zero reported cases of corruption.

Our Fraud Risk Management framework seeks to ensure that adequate preventative measures are applied and monitored across different scenarios. After introducing our remote working policies in 2020, we have adapted our engagement methods to use more virtual outreach tools to interact with a wider audience across our organization. In 2023, our anti-corruption policies and procedures were communicated to 100% of our employees.

Our Anti-Bribery and Corruption Policy is ISO-37001 certified, and in 2023, we successfully completed the ISO-37001 Surveillance Audit. We also administer a structured risk assessment process based on this standard to identify all applicable Ethics and Compliance risks that are mostly encountered in the industries and geographies we operate in. We enforce an approval and review process for gifts, entertainment, hospitality, and sponsorships. We train all employees at least once a year in anti-bribery and corruption and continuously monitor and audit relevant activities.

Assessing Anti-Corruption and Fraud	%
Operations assessed for risks to corruption	100%
Employees that the organization's anti-corruption policies and procedures have been communicated to	100%
Business Partners (including suppliers) that the organization's anti-corruption policies have been communicated to	100%

Engaging Stakeholders

Employee Training & Engagement: All employees must go through an induction and acknowledge the Code of Ethics and policies upon joining, with mandatory online training in the Code for all staff and contractors.

Supply Chain Social Assessments: As part of the Business Partner Due Diligence Process, all suppliers are screened for any negative practices, including involvement in bribery, corruption, or any violations of laws.

RELIABLE & EFFICIENT OPERATIONS

Engaging Stakeholders continued Business resilience and financial sustainability are core foundations of our approach to growing our business and creating value for our stakeholders. We aim to contribute to meeting the ever-increasing global energy demand through responsibly investing in commercially resilient projects. Our priority is to ensure that we remain relevant and competitive, by focusing on developing a balanced portfolio of investments across the value chain that reflects our strategic view of the energy markets.

Operations Management System

We adhere to our Operations Management System (OMS) to drive our operations. Our OMS is designed to foster a culture of preventing all unsafe acts and conditions while streamlining processes and procedures to achieve the highest level of efficiency in day-to-day operations. It covers all aspects related to operational functions, including HSSE and asset integrity management (AIM), exploration, digital data management, subsurface, drilling, production, and engineering and projects.

From an environmental perspective, the OMS also guides our efforts towards proactively identifying and mitigating potential environmental risks, including GHG emissions and other air pollutants, waste management, water and energy use, and biodiversity impacts. The OMS, and our

Environmental Management Standards (EMS) are governed by our QHSSE Policy. In 2023, the EMS in our Thailand, Indonesia and Malaysia business units are certified to ISO 14001: Environmental Management, ISO 9001: Quality Management, and ISO 45001: Occupational Health and Safety Management.

Our assurance process is comprehensive, including internal and external audits, trend analysis, investigations, compliance reports, lessons learned, and assessment of our performance against Key Performance Indicators (KPIs). Via our internal audit process, we assess compliance with targeted operational requirements, ensuring that policies, standards, and procedures are efficiently executed and maintained throughout the lifecycle of our projects. Through these measures, we continuously improve and ensure that we are meeting the highest standards of safety, quality, and efficiency.

Maintaining Asset Integrity

To ensure the integrity of all Mubadala Energy assets throughout their life cycle, an Asset Integrity Management (AIM) Standard forms part of the OMS. It focuses on establishing and maintaining appropriate procedures for start-up, operations, maintenance and shutdown of facilities, with particular attention to critical equipment, systems and processes. All business units are mandated to undertake an annual independent AIM review to provide extra assurance that asset integrity is

effectively managed. Alongside our AIM Standard, we have several other supporting standards and procedures that guide our activities:

- Functional Safety Standard
- Safety Critical Element Standard
- Safe System of Work Standard
- Operational Risk Management Standard
- Management of Change Standard

A Risk Management Protocol prioritizes equipment based on safety and business criticality. Safety-critical equipment and elements are managed in accordance with specific performance criteria to ensure their functionality in the event of an emergency. In addition, any degradation to equipment, plant, process lines, structural components, pipelines, etc. are identified, assessed and mitigated. To prevent major process safety incidents, failure modes and root causes are thoroughly understood through established tools such as failure modes and effects / root cause analysis. The impact of equipment failure is considered in overall system reliability, and enhanced inspection and maintenance are established for equipment whose failure could impact system reliability. By adhering to these protocols, we ensure that all assets operate with integrity and that risks are minimized throughout the equipment's life cycle.

SUSTAINING FINANCIAL RESILIENCE

2023 continued to be a volatile year for energy markets, with geopolitical tensions, producer interventions, environmental concerns and energy cost considerations to consumers all issues that played a dominant role. However, despite this backdrop, Mubadala Energy continued its focused approach to responsible value creation, and our efforts have borne fruit.

Our working interest production in 2023 averaged ca. 369,000 barrels of oil equivalent per day, which reflected the ramp up of gas production in our Pegaga gas field in Malaysia, balanced by the finalization of our operated oil assets' divestment in Thailand at the end of Q1.

2023 was also a pivotal year of success for Mubadala Energy, as we announced the success of our Layaran-1 exploration wells, in Indonesia's South Andaman acreage which we operate. This has the potential to play an important role in Indonesia's energy markets.

SUSTAINING FINANCIAL RESILIENCE CONTINUED

From the perspective of our economic performance, in 2023, a new UAE Corporate Income Tax regime became effective for accounting periods beginning on or after 1 June 2023 (applicable to Mubadala Energy from 1 January 2024). This required additional involvement to prepare the Company for the introduction of the new law. Against this backdrop, Mubadala Energy remained committed to financial stability, underpinned by our sustainability efforts to grow our business and create value for our stakeholders. With global demand for energy continuing to increase, we aim to help meet needs by investment in responsible and resilient projects. We focus on developing a balanced portfolio of investments across the value chain that reflects our strategic view of the energy markets.

Our business plan is designed to take account of a range of global economic forecasts whilst retaining the ability to take advantage of opportunities with the appropriate downside protections in place. In 2023, active cost monitoring and exercising extension options in long-term contracts for better rates than prevailing market rates helped us navigate the inflationary environment. Overall, we achieved 25% savings in operating costs and 45% savings in capital expenditure, which allowed us to meet and exceed our financial targets in terms of EBITDA, Net Income and Net Cash delivery to our shareholder.

Financial Transparency

Since 2020, Mubadala Energy has worked to enhance its corporate governance and control environment of its financial information for greater transparency and to help prevent the risk of misstatement. Through implementing Internal Controls over Financial Reporting, as well as aligning to the Committee of Sponsoring Organizations of the Treadway Commission (COSO) framework, we ensure following a comprehensive financial approach that fulfills Abu Dhabi Accountability Authority's (ADAA) requirements.

We utilize several governance controls such as our Tender Committee, Finance Committees for each asset, our Audit Risk and Compliance Committee, and the Audit Review Committee, to ensure transparency in our practices. We are in dialogue with the relevant Revenue Departments and Ministries of Finance in the respective countries and disclose relevant information as required. We have global financial governance policies in place, cascaded and embedded in our Enterprise Resource Planning system to ensure compliance with policies, procedures, and authority limits. Policies and procedures are reviewed annually across all Mubadala Energy's finance departments to ensure that there are no gaps in controls and that all new processes are updated and documented.

Mubadala Energy conducts rigorous internal audits based on risk managed by our shareholder to ensure independence as per The Institute of Internal Auditors requirements.

In 2023, we worked with independent parties to develop additional policies around Treasury, Anti-Money Laundering, Accounting and Dividend distribution policies. These policies are currently under review and likely to be implemented in 2024. To help prepare our finance teams to effectively handle corporate income tax, as well as understanding the newly introduced IFRS standards regarding sustainability disclosures, we provided corporate income tax training and training on the IFRS S1 and S2 disclosure standards to our employees, which pertains to sustainability-related financial information and climate-related disclosures, respectively.

RESPONSIBLE PROCUREMENT

We believe that companies that are better prepared for climate-related risks may be more resilient and less susceptible to supply chain disruptions. Accordingly, we take a collaborative and proactive approach with suppliers to develop and adopt sustainable innovation solutions.

This involves five clear steps:

To uphold our Corporate Procurement Policy and Business Partner Code of Conduct, we work closely with our suppliers to ensure their compliance with our ESG policies. Each supplier is required to go through a comprehensive due diligence process during tendering. We check the history of our vendors for incidents such as litigation, bribery and corruption, and risk of forced or child labor through our due diligence system. Both social and environmental considerations are included during supplier selection and audit. In 2023, we began work to develop additional guidelines around sustainable and Net Zero procurement, in line with our climate risk actions.

For critical suppliers, we conduct supplier performance reviews, in which we visit vendor sites to assess compliance with such laws. If suppliers are found to be in breach of the Code or other

requirements, they can face a range of sanctions including ultimately being blacklisted. In 2023, 100% of new suppliers were screened for ESG risks, where there were no reported breaches of our Business Partner Code of Conduct. A total of 12 supplier audits were conducted for the year.

Investing in National Suppliers

As part of our ongoing efforts to support nationalization goals and local economic development, we aim to source from local suppliers wherever we can. We offer local incentives during the bidding process or follow a direct award strategy, if mandated by host governments. In Malaysia and Indonesia, we apply In-Country Value programs to maximize local spend. In 2023, we engaged 286 local suppliers, almost 42% of our total. Our spend with local suppliers was 72% of the total.

Local Suppliers % of Total Spend

(kboe/d)

Incidents of non-compliance with applicable laws and regulations in 2023

Zero

1.

Setting clear expectations:

By being transparent with our suppliers about our sustainability goals and expectations, we clearly communicate that we are looking for solutions to address climate change risks within our portfolio.

2.

Incentivizing: This includes offering longer-term contracts or financial rewards to suppliers who can help Mubadala Energy achieve its sustainability goals.

3.

Building relationships with strategic suppliers: We aim to create a culture of collaboration and encourage suppliers to share innovative ideas and best practices.

4.

Sharing information: We help our strategic suppliers to understand our sustainability needs and identify areas where they can provide solutions.

5.

Collaborating: We work with our suppliers to identify and implement solutions to address climate change risks.

INFORMATION TECHNOLOGY

Establishing and maintaining a secure environment for the protection of Mubadala Energy's data is essential to the healthy operations of our business. We are proud to hold ISO/IEC 27001 certification for our UAE, Malaysia, and Indonesia operated locations. This is an integral part of our commitment to complying with leading international standards for information security, confirming that we have sufficient controls in place to protect all processes related to information security and data workflows.

To effectively manage security risks, we consistently identify, assess, report, and rectify vulnerabilities. This involves leveraging critical risk assessments and real-time threat intelligence.

In addition, we regularly review and enhance our security controls to address any identified gaps. Our IT team has developed clear security policies and procedures, updated annually, governing data and system operations. These include manuals and policies including our Information Security Management System, Cloud Security, Threat Intelligence, Security Operations, and procedures for Vulnerability.

Our Information Security Incident Management procedure requires employees to report any

suspicious cybersecurity activities to IT service desk or the Information Security team. This procedure outlines the requirements for managing and responding to information security incidents to ensure the confidentiality, integrity, and availability of company information assets, information systems, and networks. Vulnerabilities such as unpatched software, phishing and misconfigurations are regularly monitored and evaluated to understand the threats that are most likely to affect the company.

In our 2023 ISO/IEC 27001 audit, we successfully maintained compliance with no observations or non-conformities. While we have avoided data security breaches, we maintain a well-prepared and structured plan for any incidents that may arise. If a breach is suspected, our Incident

Response Plan is instantly activated, with our Incident Response Team coordinating response efforts. Measures are swiftly taken to contain the breach and prevent further access, and all evidence is preserved to support any current or future investigations. Breaches will be investigated thoroughly, and we will learn from the incident to both fix the system and bolster our security for the future.

Given our global presence, it is important that we implement standardized internal procedures and processes in coherence with Mubadala's Information Management Policy. We have therefore established an Information Management Forum, led by the Information Technology Director, to create information registers and define retention schedules for handling information in a compliant manner throughout its entire life cycle. Our current focus is on implementing solutions to reinforce relevant policies in Microsoft-based document management platforms.

Finally, we have a robust data privacy program, aligned with regulatory requirements including the European Union General Data Protection Regulation and UAE's Personal Data Protection law. Our current focus is on implementing identified tools and management systems to ensure compliance with the policy requirements. In 2023, our annual IT Disaster Recovery test showed a 100% success rate across all global geographies.

We also participated in a data privacy audit conducted by our shareholder. We took a number of actions, including enhancing our data privacy governance framework, enhancing classification labeling review programs, conducting regular reviews and updates of data retention schedules, and implementing standardized third-party data protection clauses for exchanging personal information.

Incidents of data breaches for the last five consecutive years

Zero

“Sustainability is a key consideration when procuring new equipment; we assess equipment based on criteria such as energy efficiency, recyclability, and overall lifecycle sustainability, ensuring that our IT procurement aligns with our commitment to sustainability.”

INNOVATION & DIGITAL TRANSFORMATION

As the global energy industry shifts towards a more sustainable future, companies are recognizing the need to embrace digital technologies to drive innovation. Three years into the implementation of our Digital Transformation Strategy, we are beginning to see results against our mission to foster a digital culture that supports sustainable value and accelerates the path to energy transition.

In 2023, we rolled out the identity for our digital transformation journey - E-VOLVE geared at accelerating the execution of our transformation projects. Aligned with our business goals, the introduction of E-VOLVE strengthens our commitment to operational efficiency and innovation. As we navigate the evolving digital landscape, embracing E-VOLVE remains essential for our future success, ensuring positive change and sustained value creation for shareholders and partners through digital solutions.

Mubadala Energy Digital Transformation Strategy

In 2019, we launched our Digital Transformation roadmap to cultivate a digital culture that supports the company's objective to deliver sustainable value and accelerate our path to energy transition.

Alongside our Digital Transformation Strategy, our Information Technology Strategy is aimed at areas

such as process optimization, cyber resilience, people development, cloud excellence, data management, and advanced analytics.

Some examples of digital projects introduced in 2023 include:

- **Pegaga Digital Twin Project:** we completed Phase 1 design, which includes the implementation of a pilot the testing of an Intelligent HSSE program and an Integrated Well & Reservoir Management system. This project allows us to enhance predictive maintenance, implement more intelligent operations, monitor emissions on a real time basis, improve safety of our personnel on sites, etc.
- **Asset Production Monitoring Project,** which was implemented to consolidate our portfolio monitoring, has significantly improved production processes, allowing us to take corrective measures to increase efficiency, reduce waste and improve our environmental impact.

The roadmap covers the following areas:

- **Digital Operating Model** was mobilized, including the implementation of a digital opportunities identification system and a portfolio dashboard, and the activation of a dedicated Digital Champions Network to enhance our opportunity identification processes.
- **HSSE Tracking Dashboard** was introduced, including the implementation of video/sensor analytics and alerting systems, and real time GHG emissions measurement and monitoring systems.

Most of the digital projects conducted in 2023 have had a positive impact on environmental aspects, especially those under the Operational Excellence pillar. Benefits have included the

elimination of manual data entry, resulting in reduced resource consumption, the development of an ESG reporting dashboard for improved access to ESG insights and better decision making, and systems upgrades to reduce electronic waste.

Our digital transformation projects have been recognized internally within Mubadala Energy, and across the industry, with some awards including: the Inspiration Award for E-VOLVE at ADIPEC 2023, and acknowledgements by SPE Abu Dhabi, for the technical presentation on “Practical Implementation of the Data Strategy for the Energy Transition in the Middle Eastern Based International Energy Company”

INNOVATION & DIGITAL TRANSFORMATION CONTINUED

Case Study on Intelligent Drilling: The Pegaga Digital Twin Project, Malaysia

Utilizing video and sensor analytics and a smart GHG emissions measurement system is crucial for operational excellence and superior HSSE practices. In 2023, we piloted an intelligence HSSE system at our operated Pegaga Platform in Malaysia to enhance monitoring and incident prevention, while reducing incident response times. At the same time, we completed the first phase of an intelligent well/reservoir management project, with continuous monitoring of subsurface and surface models, providing production allocation recommendations, ensuring well integrity, supporting production forecasting, offering real-time alerts, and delivering robust data visualization and insights.

The gas turbine predictive maintenance project was successfully completed, with cloud monitoring and diagnostics forecasted to avoid up to 50% in operational costs, while reducing rapid response times and enhancing 24/7 support and regulatory compliance by minimizing unplanned downtime through proactive maintenance.

Looking forward to 2025 and beyond, we will be establishing a command center for real-time monitoring and management of operations. It will integrate data from various sources, enabling remote control, data-driven decision-making, and predictive maintenance. This centralized hub enhances operational efficiency, safety, and cost-effectiveness while providing a scalable platform for continuous innovation and optimization in asset operations.

RISK MANAGEMENT

At Mubadala Energy, we manage risks that are related to our strategy and its execution. We administer a structured risk assessment process to identify all applicable enterprise risks and risk factors that are relevant for our industry and geographies. Governed by our Enterprise Risk Management (ERM) Standard, we continue working towards actioning a comprehensive Risk Management Framework which ensures the accurate identification, mitigation and management of potential risks that could negatively impact our business and its operations.

A key element of our risk management structures includes the appointment of Risk Champions, who work together to identify mitigating controls in place and develop additional risk mitigation plans according to the type of risk and resources available that are necessary to reduce the risk's residual impact. The ERM function regularly engages with risk owners and champions with both one-to-one sessions and workshops; such engagement supports the effective development of the company's risk culture, in addition to regular risk awareness communications and direct risk reporting to all employees. Moreover, the ERM function participates in operational performance review meetings for all operated and non-operated assets.

To continue enhancing our risk management practices, we conducted a major review of our ERM Standard in 2023, which captured lessons learned, improvement opportunities and enhanced alignment with the expectations of our shareholder. The revised ERM Standard which has now been implemented reflects best practices in the industry. In the future, we aim to further align our ERM policies with international standards such as ISO 31000, and to continue raising awareness about ERM through conducting more frequent risk workshops with our asset managers, functions, and business units.

Our ERM Process

Each business unit and function throughout the Mubadala Energy portfolio conducts the ERM process at minimum, on a quarterly basis. At the corporate level, risks are then consolidated to provide our Mubadala Energy leadership with clear oversight of the overall risk landscape to which the company is exposed. This risk information will inform decision-making and provide assurance that risks are identified and managed across the organization.

In line with our sustainability focus on environment, economy, and people, all risks are assessed and categorized in one of four main risk categories, which include:

Financial

**Legal, Compliance
& Reputation**

**Health, Safety, Security
and Environment (HSSE)**

**Organizational
Capability Impact**

RISK MANAGEMENT CONTINUED

Assessing Climate-Related Risks

Climate change impacts industries, businesses, and supply chains, and Mubadala Energy recognizes that climate-related risks and challenges can significantly affect our operations and investments. Addressing these risks is crucial the understanding the wider impact of our business, maintaining competitiveness, and supporting sustainable energy supplies. We focus on lower carbon alternatives like natural gas and embrace innovations such as fuel blending and zero-flaring to reduce our carbon footprint.

Our governance framework ensures oversight from the Board and leadership team, integrating climate risk management into our strategy. By identifying and managing climate-related risks

and opportunities, we support the resilience of our business and demonstrate our commitment to advancing climate action, ensuring sustainable and responsible operations.

The Taskforce for Climate-related Financial Disclosures (TCFD), as seen in the graphic below, provides guidelines and recommendations for organizations to disclose information on governance, strategy, risk management, and metrics and targets related to climate-related financial risks and opportunities. As of 2024, TCFD disclosures have now been absorbed within the IFRS Sustainability Standards. For our 2023 report, we have continued to disclose information in line with TCFD as follows, to provide an update on our previous reporting disclosures.

Core Elements of TCFD Recommendations

Governance		Disclose the organization's governance around climate-related risks and opportunities
Strategy		Disclose the actual and potential impacts of climate-related risks and opportunities on the organization's businesses, strategy, and financial planning where such information is material.
Risk Management		Disclose how the organization identifies, assesses, and manages climate-related risks
Metrics and targets		Disclose the metrics and targets used to assess and manage relevant climate-related risks and opportunities where such information is material

UN Sustainable Development Goals

Ensuring we make a meaningful contribution

OUR SUSTAINABILITY AGENDA

Alignment to the UN Sustainable Development Goals

Our sustainability agenda is designed to ensure we contribute to key global initiatives such as the advancement of the UN Sustainable Development Goals (UN SDGs).

This alignment starts from the selection of material topics, to how we conduct our day-to-day business, and the influence we have on the people and the planet.

The UN SDGs serve as a comprehensive roadmap for fostering inclusive economic growth throughout the remainder of this decade. They consist of 17 integrated and interdependent goals, and although our business impacts all either directly or indirectly, we have identified nine primary focus areas that closely align with our activities and reflect where we have made the most substantial impact. This is discussed in further detail within the next pages.

By embracing the UN SDGs, we not only demonstrate our commitment to creating a more sustainable world but also amplify our influence on a global scale. We recognize that our actions have far-reaching consequences, and we seek to actively embrace the responsibility to drive positive change.

UN Sustainable Development Goals

OUR SUSTAINABILITY AGENDA CONTINUED

UN SUSTAINABILITY GOALS

SDG Goals	Our Commitments	Alignment with Specific Targets	Alignment with Material Issues
 3 GOOD HEALTH AND WELL-BEING	The health and wellbeing of our workforce is integral to the culture of our company's DNA, and safety practices are embedded across all activities and operations in our business. We manage the health, safety and wellbeing of our workforce by identifying, managing, and mitigating potential risks, ensuring thorough training programs are in place. We aim to reduce our environmental impact and enhance social well-being by implementing meaningful community development initiatives.	Target 3.9: By 2030, substantially reduce the number of deaths and illnesses from hazardous chemicals and air, water and soil pollution and contamination.	• Health, Safety & Security of People • Contributing to Communities & Society • Leading Employment Practices
 4 QUALITY EDUCATION	Our goal is to cultivate a skilled workforce that drives and contributes to our business growth. We prioritize employee training and development, supporting their career goals and interests. Broadening our impact, education is a key focus of our CSR framework. We work to enhance access to quality learning by supporting various educational initiatives, including scholarships for financially disadvantaged students, organizing skills training programs, and improving school facilities across the countries where we operate.	Target 4.3: Ensure equal access for all women and men to affordable and quality technical, vocational, and tertiary education, including university. Target 4.4: Increase the number of youth and adults who have relevant skills, including technical and vocational skills, for employment, decent jobs, and entrepreneurship.	• Talent Building & Retention • National Talent Enhancement • Leading Employment Practices • Contributing to Communities & Society
 7 AFFORDABLE AND CLEAN ENERGY	At the essence of our business, we are committed to delivering reliable and affordable energy efficiently and securely, and ensuring our position as a responsible and sustainable energy provider. Guided by our Corporate Strategy 2030, we know the importance of natural gas as a dependable and transitional energy source. As we continue to meet this demand for this energy source, we maintain our activities in exploration and investments new energy arms such as Blue Hydrogen and Carbon Capture and Storage (CCS), and geothermal.	Target 7a: Enhance international cooperation to facilitate access to clean energy research and technology, including renewable energy, energy efficiency, and advanced and cleaner fossil-fuel technology, and promote investment in energy infrastructure and clean energy technology. Target 7i: Ensure universal access to affordable, reliable, and modern energy services. Target 7.2: Increase substantially the share of renewable energy in the global energy mix.	• Low Carbon Energy Solutions • Climate Change & Energy Transition • GHG & Other Air Emissions • Strategy, Purpose & Financial Resilience • Reliable & Efficient Operations • Stakeholder Engagements & Partnerships

OUR SUSTAINABILITY AGENDA CONTINUED

UN SUSTAINABILITY GOALS CONTINUED

SDG Goals	Our Commitments	Alignment with Specific Targets	Alignment with Material Issues
 8 DECENT WORK AND ECONOMIC GROWTH	Strive to build a better world where every individual has an equal opportunity to live and flourish. Our community development initiatives go in-hand with our drive to support economic growth and improve living standards by creating jobs in the countries where we operate, with a strong focus on nurturing local talent through training and internship programs. We are committed to promoting local procurement and ethical practices throughout our supply chain is essential to economic prosperity. Supporting a culture of safety, inclusivity and equal opportunity is essential to our business and the satisfaction of our stakeholders.	Target 8.5: Achieve full and productive employment and decent work for all women and men, including for young people and persons with disabilities, and equal pay for work of equal value. Target 8.6: Substantially reduce the proportion of youth not in employment, education, or training. Target 8.8: Protect labor rights and promote safe and secure working environments for all workers.	• Diversity & Inclusion • National Talent Enhancement • Talent Building & Retention • Responsible Procurement • Strategy, Purpose & Financial Resilience • Governance & Business Ethics • Stakeholder Engagements & Partnerships • Upholding Human Rights
 11 SUSTAINABLE CITIES AND COMMUNITIES	Our mission to turn cities into lively, inclusive, and sustainable environments centers on our community projects. These initiatives are anchored in the four pillars of our CSR framework: Education, Environment, Community Development, and Employee Engagement. Our collective efforts to build a better world for present and future generations are informed by our CSR Framework.	Target 11.3: Enhance inclusive and sustainable urbanization and capacity for participatory, integrated, and sustainable human settlement planning and management. Target 11.7: Provide universal access to safe, inclusive, and accessible, green, and public spaces, particularly for women and children, older persons, and persons with disabilities.	• Contributing to Communities & Society • Stakeholder Engagements & Partnerships
 12 RESPONSIBLE CONSUMPTION AND PRODUCTION	We engage in community projects that enhance environmental protection and foster sustainable consumption and production patterns, contributing to a healthier planet for future generations. Our commitment to ensuring we align with stringent environmental standards and promoting best practices reflects our significant efforts to drive sustainability and responsible resource management.	Target 12.2: Achieve the sustainable management and efficient use of natural resources. Target 12.5: Substantially reduce waste generation through prevention, reduction, recycling, and reuse.	• Responsible Procurement • Water Management • Waste & Spills Management • Energy Consumption • Biodiversity & Conservation • Reliable & Efficient Operations

OUR SUSTAINABILITY AGENDA CONTINUED

UN SUSTAINABILITY GOALS CONTINUED

SDG Goals	Our Commitments	Alignment with Specific Targets	Alignment with Material Issues
	At Mubadala Energy, we're not just adapting to climate change – we're driving transformative action. By aligning with global initiatives like the UAE Net Zero agenda, we're on the path towards a low-carbon energy future. Through strategic investments in energy efficiency and the exploration of innovative technologies, such as carbon CCS, we are reducing our GHG emissions and setting new standards for sustainability in the energy sector. Our commitment extends beyond operational efficiency as we're actively engaging communities, transferring knowledge, and fostering environmental stewardship to create a prosperous and sustainable future.	Target 13.2: Integrate climate change measures into national policies, strategies, and planning. Target 13.3: Improve education, awareness-raising, and human and institutional capacity on climate change mitigation, adaptation, impact reduction, and early warning.	• Climate Change & Energy Transition • Low Carbon Energy Solutions • Energy Management • Biodiversity & Conservation • Innovation & Digital Transformation • GHGs & Other Air Emissions
	At Mubadala Energy, our commitment to preserving marine ecosystems is a cornerstone of our sustainability efforts. We are dedicated to reducing our water footprint through innovative conservation technologies and practices. By prioritizing the protection of our precious water resources, we aim to make a meaningful impact on the health of our oceans. Our initiatives go beyond operations, as we actively engage and inspire our employees and communities to embrace water-saving practices and promote environmental stewardship.	Target 14.1: By 2025, prevent and significantly reduce marine pollution of all kinds, particularly from land-based activities, including marine debris and nutrient pollution. Target 14.2: Sustainably manage and protect marine and coastal ecosystems to avoid significant adverse impacts, including by strengthening their resilience, and take action for their restoration to achieve healthy and productive oceans.	• Biodiversity & Conservation • Water Management • Stakeholder Engagements & Partnerships
	At Mubadala Energy, we are dedicated to biodiversity and conservation, which is reflected through our focus on marine conservation and mangrove planting. With our pledge to plant 700,000 mangroves by 2030, our efforts reflect our commitment to fostering climate change mitigation, coastal protection, and habitat provision, which are pivotal to SDG 15. We actively engage in community education, partnering with NGOs and participating in sustainability dialogues to promote the importance of blue carbon ecosystems and conservation efforts. By advocating for nature-based solutions and involving local communities, we strive to create a sustainable future for all.	Target 15.3: By 2030, combat desertification, restore degraded land and soil, including land affected by desertification, drought, and floods, and strive to achieve a land degradation-neutral world. Target 15.5: Take urgent and significant action to reduce the degradation of natural habitats, halt the loss of biodiversity, and, protect and prevent the extinction of threatened species.	• Biodiversity & Conservation • Stakeholder Engagements & Partnerships

1. GRI CONTENT INDEX CONTINUED

Topics in the applicable GRI Sector Standards determined as not material

Topic	Explanation
Topic 11.7 Closure and rehabilitation	Our operations involve continuous production facilities with minimal environmental disruption and no current or planned activities that would require significant closure or rehabilitation efforts.
Topic 11.12 Forced labor and modern slavery	We have rigorous policies and supplier due diligence processes in place to prevent forced labor and modern slavery within our supply chain, with no identified risks or incidents that would materially impact operations.
Topic 11.13 Freedom of association and collective bargaining	Legal constraints within UAE restrict the scope of labor union activities and collective bargaining.
Topic 11.16 Land and resource rights	Operations primarily involve leased or privately owned land with no disputes or significant conflicts over resource rights. Our activities do not foresee expansion into areas where land rights issues would be a concern.
Topic 11.17 Rights of indigenous peoples	Operations in UAE's oil and gas sector do not impact indigenous communities or their rights. Projects are situated in areas without indigenous populations.
Topic 11.18 Conflict and security	We operate within secure industrial zones and adhere to rigorous security protocols in our oil and gas operations. We implement proactive measures and mitigate risks related to conflict and security incidents.
Topic 11.19 Anti-competitive behavior	We maintain strict adherence to anti-competitive practices and compliance with regulatory frameworks within UAE's oil and gas sector. There are no identified instances or significant risks of anti-competitive behavior that would necessitate detailed reporting.
Topic 11.21 Payments to governments	We follow standard industry practices regulated by local authorities and ensure compliance with all financial obligations, with no material discrepancies or significant impacts.
Topic 11.22 Public policy	Our company's involvement in public policy issues within the UAE's oil and gas sector is not significant to our operations. We are primarily focused on complying with regulations and adhering to industry standards.

2. MAPPING OUR KEY STAKEHOLDERS

We encourage and participate in a wide range of stakeholder engagements to help bring clarity around our strategy and its alignment with global sustainability trends, including our decarbonization efforts.

Stakeholder Group	Importance to Mubadala Energy	Priority Concerns	Methods of Engagement
Shareholder (Mubadala)	Mubadala Energy is 100% owned by Mubadala Investment Company, which is fully owned by the Government of Abu Dhabi	- Alignment with responsible investing ambitions - Comprehensive ESG opportunity and risk management - Delivery of sustainable financial returns - Protection of shareholder reputation	- Shareholder meetings - Committees including the Executive Committee (ExCom) - Regular reporting - Formalized performance scorecards
Employees	Our staff remains the key enabler of our business sustainability and resilience	- Leading employment practices, including remuneration - Career development and fulfilment opportunities - Safety and wellbeing within the working environment	- Town halls and special engagement events - Training and workshops - Communication via video messaging, meetings, emails, internal web-based platform - Committees - Youth Councils
Customers	Ensuring that we are a responsible provider of energy for the long term	Ensuring we meet our contractual obligations in a safe, responsible, and efficient manner	- Annual customer surveys are held - Emails and other direct communications - Website and social media platforms
Partners	Close cooperation, either as operator or as a partner within the assets we have interests in	- Collaboration to ensure that we remain a responsible, affordable and long-term provider of energy - A foundational approach of our strategy lies in collaboration with our partners	- Managed directly by country managers in business units and asset managers for non-operated assets - Regular meetings, formalized committees, reports - Website and social media platforms
Local Communities	Key to achieving and maintaining our social license to operate	- Collaboration - Transparency - Management of concerns, expectations and agreed objectives	- Country Manager and Government Affairs teams manage direct contact - Special engagement events - Website and social media platforms
Government Authorities	Key to achieving and maintaining our license to operate	- Transparency and good governance practices - Solid investment approach, to create value for all parties	- Country Managers and Government Affairs teams manage all direct contact - Website and social media platforms

3. TCFD DISCLOSURES

Governance		
Recommended Disclosure	Our Approach	2023 Progress Update
Describe the board's oversight of climate-related risks and opportunities.	We adhere to a clearly defined governance structure aligned with shareholder policies, ensuring the highest standards of transparency, ethical practices, and fairness. The Board of Directors provides strategic direction and oversight, guiding performance based on these priorities. The Executive Committee (ExCom), established by the Board, handles strategic planning, and risk oversight which includes climate-related risks.	Regular Board meetings addressed sustainability-related issues. ESG due diligence for portfolio optimization activities, including investments and divestitures, was presented to the Board. The ExCom reviewed new projects and investments to ensure compliance with our investment guidelines, strategy, and sustainability objectives.
Describe management's role in assessing and managing risks and opportunities.	We have a dedicated Energy Transition & Decarbonization Function, which also covers our Sustainability arm of the business. This team reports directly to our CEO, and has the responsibility and accountability for the origination of opportunities in low carbon energy solutions, which is brought to the ExCom and Board as relevant for review and potential investment decisions. Our established Emissions Management Committee coordinates and directs initiatives focused on exploring opportunities for GHG emissions reduction and optimization across the portfolio. The Committee generates recommendations for the executive leadership team, contributing to the continuous development of the company's decarbonization roadmap. In terms of risk management, our ERM Function integrates environmental risks as a pillar in the ERM process. The formalized framework for assessing and managing climate-related risks and opportunities aligns with TCFD recommendations, addressing both transition and physical risks. To ensure that risks are identified and to support decision-making, risks are consolidated to provide our Mubadala Energy leadership with a comprehensive view of the overall risk landscape.	The ExCom has oversight and is part of the approvals hierarchy of our business planning, which includes initiatives in decarbonizing our portfolio, and where applicable, capital allocation on investments in low carbon solutions. The Emissions Management Committee met regularly in 2023 to review and coordinate emissions reduction initiatives. The Committee's recommendations led to the enhancement of the decarbonization roadmap, ensuring that both energy transition and physical risks were addressed. Specific actions and strategies developed by the Committee were integrated into the company's broader sustainability objectives, supporting the governance of environmental management.

3. TCFD DISCLOSURES CONTINUED

Strategy		
Describe the climate-related risks and opportunities the organization has identified over the short, medium, and long term.	We integrate ESG considerations into our corporate and sustainability strategies and our ERM approach to regularly identify and assess climate change-related risks across operations and investments. This proactive approach aims to enhance resilience to climate-related challenges and capitalize on emerging opportunities.	We conducted annual business planning and periodic ERM assessments, assessing market impacts such as commodity price volatility and production costs under different energy demand scenarios. The implementation of an energy transition strategy aligns with stakeholder and governmental objectives, focusing on low carbon energy solutions. Regulatory impacts on emissions disclosures were analyzed across the portfolio. Initiatives like fuel blending in Thailand and zero routine flaring at the Pegaga gas project in Malaysia demonstrate ongoing commitments to energy transition. Physical risks, including weather events and potential flooding, were integrated into the Business Continuity Plan to ensure operational continuity and employee safety.
Describe the impact of climate-related risks and opportunities on the organization's businesses, strategy, and financial planning.	Our proactive approach of integrating ESG considerations into our ERM process and other key investment and project-related stage gate milestones results in the consideration of market, reputational, policy, pricing, and technology risks related to climate change. We are in the process of developing our internal carbon pricing policy in 2024 – this will assess carbon price risks across assets and new investments. Strategic oversight monitors policy trends and energy demand/supply outlooks to ensure portfolio sustainability. Our annual business planning process incorporates various global economic assumptions, ensuring flexibility and the capacity to seize new opportunities.	We assessed the impact of climate-related risks and opportunities on business, strategy, and financial planning. External consultants were engaged to develop policies around Treasury, Anti-Money Laundering, Accounting, and Dividend distribution, integrating sustainability considerations. Finance teams were trained in new IFRS standards for sustainability disclosures. The implementation of energy transition initiatives and our decarbonization roadmap aligns with stakeholder and governmental objectives and is discussed throughout this report. Physical risks, including weather events and potential flooding, are integrated into the Business Continuity Plan to ensure operational continuity and employee safety. Transition risks are incorporated in our strategy, and are being addressed through its implementation – i.e., to explore expansion in new energies technology and investment areas (Partnership agreements entered into in 2023 covers areas such as sustainable fuels, CCUS, geothermal energy projects, and decarbonization solutions and support.)

3. TCFD DISCLOSURES CONTINUED

Strategy continued

Describe the resilience of the organization's strategy, taking into consideration different climate-related scenarios, including a 2°C or lower scenario.	We assessed climate-related scenarios, including a 2°C or lower scenario, in the development of our corporate strategy in 2021. Delivery of country plans in 2023 included market and regulatory reviews, initial carbon pricing risk assessments, and updates on energy outlooks under various climate scenarios. The current portfolio is protected due in part to long-term contracts and enhanced commercial structures. The focus on gas enhances business stability compared to more oil-rich portfolios. Initiatives like sustainability-linked procurement guidelines are being developed to further address climate risks.	Our corporate strategy considers climate, market, and regulatory changes and its potential impact to our business. We progressed in 2023 in assessing climate-related scenarios through market and regulatory reviews, carbon pricing risk assessments, and energy outlook updates.
---	---	---

Risk Management

Describe the organization's processes for identifying and assessing climate-related risks.	Our ERM approach helps to regularly identify and assess climate change-related risks across operations and investments. ESG integration enhances resilience to climate-related challenges and ensures transparent reporting aligned with TCFD recommendations.	We improved our ERM approach by integrating ESG considerations into our risk assessment processes. Regular identification and assessment of climate-related risks were conducted across operations and investments. In 2024, we integrated into our investment lifecycle process an ESG due diligence requirement for the consideration of new investments or divestments. This proactive stance supports our organization in adapting to and mitigating climate-related challenges while capitalizing on opportunities. Ongoing efforts align with TCFD guidelines for transparent reporting on climate-related risks and opportunities.
Describe the organization's processes for managing climate-related risks.	We incorporate annual business planning and ERM assessments to consider scenarios of commodity price volatility, changes in long-term energy demand, and their impacts on production costs. Implementation of an energy transition and the sustainability strategy focuses on expanding low carbon energy solutions aligned with stakeholder and governmental objectives. Each asset within the portfolio evaluates regulatory changes in emissions disclosures and reporting, analyzing financial impacts and adjusting asset value propositions accordingly.	We continued enhancing climate-related risk management processes across market, reputation, policy & legal, technology, and physical dimensions. Initiatives like fuel blending and zero flaring demonstrate tangible steps toward reducing environmental impact, while robust Business Continuity Plans mitigate operational disruptions from acute and chronic climate-related events.

3. TCFD DISCLOSURES CONTINUED

Risk Management continued

Describe how processes for identifying, assessing, and managing climate-related risks are integrated into the organization's overall risk management.

We integrate climate-related risk management into our overall ERM framework. We conduct structured risk assessments governed by ERM standards to identify and mitigate enterprise risks relevant to our industry and geographical operations. ESG considerations are integral to these assessments, enhancing proactive management of climate-related risks and opportunities. Transparent reporting aligns with TCFD recommendations to ensure stakeholders are informed about climate impacts.

The integration of ESG factors into risk assessments facilitated proactive risk mitigation and identification of emerging opportunities related to climate change. Progress towards a robust Risk Management Framework continued to strengthen the organization's ability to manage and mitigate potential risks affecting business operations.

Metrics and Targets

Disclose the metrics used by the organization to assess climate-related risks and opportunities in line with its strategy and risk management process.

Mubadala Energy tracks several climate-related metrics across both its operated and non-operated portfolio of assets. This includes its Scope 1 and Scope 2 GHG emissions, and other air pollutants. In terms of our Scope 1 footprint, we provide more detail in terms of the level of flaring or venting, etc. Our ESG Performance Data in the Appendix provides historical data for the last three years on these and other relevant metrics.

Disclose Scope 1, Scope 2, and, if appropriate, Scope 3 greenhouse gas (GHG) emissions, and the related risks.

For more information on the reporting of our Scope 1 and Scope 2 GHG emissions, please refer to our Environmental section (page xx), and our ESG Performance Data in the Appendix. Our Scope 1 and Scope 2 data for the UAE, Malaysia and Indonesia has been independently assured for the years' 2022 and 2023, and this assurance statement is also included in the Appendix. We currently do not report our Scope 3 GHG Emissions.

Describe the targets used by the organization to manage climate-related risks and opportunities and performance against targets

We are aiming to establish targets in line with our decarbonization roadmap, the ambitions of our shareholder, and the commitments established by the UAE's leadership around climate. Our performance has been exceptional in recent years, and in 2023 alone, we have reduced our Scope 1 & 2 GHG emissions by 66% on an absolute basis.

4. CHARTING THE POTENTIAL IMPACTS ASSOCIATED WITH OUR MATERIAL ESG ISSUES

Environmental Topics		Impact to Mubadala Energy & its Stakeholders
1	Climate Change & Energy Transition	- Strengthens corporate reputation through the identification and mitigation of climate change risks, and allows for capitalizing on opportunities for innovation and growth - Enhances resilience to regulatory and market changes, and can provide potential cost savings through the avoidance of regulatory penalties such as carbon taxes, or loss of revenue from stranded assets or markets shifts away from unabated fossil fuel energy demand - Contributes to regional and global efforts to address climate change (e.g. the UAE Net Zero by 2050 target), through the increased focus on carbon abatement, adoption of cleaner technologies, investment in select lower energy sources, etc.
2	Low Carbon Energy Solutions	- Provides value creation opportunities for innovation/growth through responding to market changes e.g., an increased demand for lower emissions-intensity energy sources, contributing to more diversified revenue streams - Increases competitive advantage as the company upholds its ethos as a responsible producer of energy by lowering its emissions footprint - Potential mitigation against reputational damage/loss of social license to operate, and the incurrence of stranded assets.
3	GHGs & Other Air Emissions	- Supports the company's compliance with environmental regulations and standards (reducing the risk of fines), and contributes towards delivering on global/regional climate targets - Focuses operations on improvements in energy efficiency to lower emissions intensity, which can also lead to cost savings where applicable - Enhances corporate reputation and stakeholder trust, and fosters stronger relationships with communities and investors
4	Energy Consumption & Efficiency	- Potential cost savings to the company from pursuing energy efficiency-related projects, enhancing the resilience of operations to regulatory changes - Allows for lower GHG emissions through more efficient operations, also mitigating against energy shortages, and performance limitations associated with energy-inefficient technologies. - Contributes to the reduction in the overall environmental footprint of operations, and can be a demonstration of industry leadership for peers to adopt similar models/practices
5	Water Resource Management	- Can lead to cost savings and improved water risk identification and mitigation measures - Helps to mitigate against operational disruptions from water restrictions/increased cost of water consumption, new/additional water consumption regulatory requirements - all stemming from growing water scarcity and water pollution-related issues.
6	Spills & Waste Management	- Efficient and effective waste management practices (e.g.: waste reduction, recycling, proper disposal, and spill prevention) can help to mitigate waste-related risks (e.g.: Pollution, inefficient resource consumption, penalties) and reduce costs (e.g.: waste storage, lowered procurement costs). - Helps to mitigate against operational disruptions from accidents and spills, decreased productivity, risks of legal liabilities, and regulatory non-compliance.
7	Biodiversity & Ecosystems	- Mitigating the company's impact on biodiversity can reduce risks of operational disruptions and avoid non-compliance with environmental regulation and associated penalties. - Enhances the social license to operate and mitigates against local community disruptions that may lead to project delays. - Helps to integrate global and regional targets associated with biodiversity conservation.

4. CHARTING THE POTENTIAL IMPACTS ASSOCIATED WITH OUR MATERIAL ESG ISSUES CONTINUED

Social Topics		Impact to Mubadala Energy & its Stakeholders
1	Health, Safety & Security of People	- Prevention of workplace injuries, illnesses, and incidents, leading to lower absenteeism and turnover rates, as well as improved morale, job satisfaction, employee retention rates, and increased productivity. - Prevention of operational disruptions, reputational damage, and security breaches associated with Health, Safety and Security incidents. - Reduction of community health hazards, effective response measures to emergency situations, and health and safety training and employment opportunities to communities.
2	Talent Building & Retention	- Enhanced operational efficiency, innovation, and responsiveness to market changes, improved job satisfaction, and skill capabilities - Attracting and retaining highly talented employees, which also enhances succession planning and can reduce the overall training or upskilling costs - Helps to foster the development of a skilled local labor pool that can drive economic growth and prosperity beyond the company
3	Leading Employment Practices	- Ability to effectively understand and address employee needs, provide competitive and comprehensive benefits to attract and retain the best talent, which can all contribute to lowering hiring and training costs - Provision of a productive working environment which can lead to increased loyalty and engagement and reduced turnover - Prevention of decreased employee satisfaction and morale or poor engagement which can impact the delivery of our strategy and business objectives
4	Diversity & Inclusion	- By creating an environment of fairness in representation and engagement, we strive to enhance employee satisfaction and productivity, fostering a culture of openness, trust and collaboration - Promotes innovation and creativity; and helps to attract and retain employees. - Contributes to the UN SDG of gender equality and broader national/regional focus on representation
5	National Talent Enhancement	- Empowers national employees and contributes to the development of the local leadership talent pool - Promotion of local succession planning, and effective national talent investment programs. - Contribution towards local economic development and country-specific national talent ambitions, increased employment opportunities for nationals, shared best practices, and increased social mobility.
6	Contributing to Communities & Society	- Enhances corporate reputation, brand value, and social license to operate, fostering positive relationships with stakeholders, including employees - Contribution to the well-being of local communities by addressing specific needs and vulnerabilities, enhancing socio-economic conditions (e.g.: job creation) and quality of life (e.g.: increased spending power), strengthening social cohesion and resilience.
7	Upholding Human Rights	- Enhances stakeholder trust, corporate reputation, and investor confidence, as well as improves employee attraction, retention, and health and safety practices. - Engagement with governments, local communities, and suppliers on human rights issues promotes dialogue, collaboration, and collective action to address systemic human rights challenges and promotes positive change

4. CHARTING THE POTENTIAL IMPACTS ASSOCIATED WITH OUR MATERIAL ESG ISSUES CONTINUED

Governance Topics		Impact to Mubadala Energy & its Stakeholders
1	Governance and Business Ethics	- Strengthens organizational culture and employee morale, adherence to legal and ethical standards, and helps ensure full compliance to applicable law - Reduces risks of misconduct or non-compliance which can have legal/regulatory repercussions, and promotes the effective and efficient use of company resources - Increases stakeholder trust, increased culture of integrity, increased transparency and accountability; could increase recognition from government/regulatory bodies
2	Reliable & Efficient Operations	- Focus on optimizing resource use, improved profitability and financial stability, promotes operational integrity and preparedness for emergency situations - Enhances the ability to restore operations in a timely and effective manner, through proactive risk management, and strong employee and community trust. - Contributes towards energy security in local and regional markets, as well as indirect economic impacts associated with high levels of energy security (e.g.: stable energy prices, economic growth, investment attraction, and job creation).
3	Strategy, Purpose & Financial Resilience	- Effective and efficient use of capital, increased ability to raise capital (e.g.: traditional and/or sustainable financing), stable and increased revenues, increased market share, and entry into new markets. - Mitigates against potential economic challenges that can impact revenue streams and profitability, which in turn could affect investment decisions, project viability, access to capital markets, and business continuity, etc. - Allows the company to also take advantage of new revenue streams from opportunities that are linked to its strategic priorities, and potential first mover advantages
4	Stakeholder Relations & Partnerships	- Fosters shared understanding, feedback, and collaboration opportunities, drives continuous improvement and stakeholder satisfaction, enhances risk management and capital allocation, and increases competitive advantage. - Mitigation against challenges in understanding and effectively managing diverse stakeholder interests which can lead to conflicting priorities, misallocation of resources, project delays, biased decision-making, internal challenges, inefficient operations, increased employee turnover, and supplier relationship issues. - Promotes shared decision-making, innovative solutions, and alignment of interests, leading to more socially responsible outcomes and inclusive development.
5	Cyber security	- Protection of sensitive data, digital assets and operational processes, enhanced risk management (including third-party risks), safeguarding of critical systems, compliance with local regulations, and fostering digital transformation. - Protection of sensitive stakeholder information and critical infrastructure (i.e.: energy infrastructure), and prevention of energy disruptions
6	Innovation & Digital Transformation	- Improved operational efficiencies, acceleration of technology adoption, promotion of innovation, optimized asset management, increased competitive advantage, and improved safety capabilities. - Contribution towards industry advancements and collaboration amongst partners and technology providers, fostering knowledge exchange and sharing of best practices, as well as efficient resource use.
7	Responsible Procurement	- Companies that prioritize responsible practices throughout their supply chains can improve operational efficiencies, enhance risk management, comply with labor standards, improve corporate reputation, and attract investors, as well as drive positive environmental and social outcomes. - Contribution towards environmental and social protection, labor and human rights standards/laws, and promotion of responsible business practices.

5. GHG EMISSIONS REPORTING CRITERIA (SCOPE 1 & 2)

Scope	Definition	Category	Sub Category	Definition	Source	Activity Data
Scope 1	Direct GHG emissions occurring from sources which are owned or controlled by Mubadala Energy that release emission direct to the atmosphere	Fuel Combustion	Stationary Combustion	Combustion of fuels in stationary equipment such as boilers, furnaces, burners, turbines, heaters, incinerators, engines, flares, etc.	Gas engines	Gas consumption is reported by Operational sites with the record of Fuel gas metering (standard cubic feet)
					Diesel/Biofuel engines	Diesel consumption is reported by operational sites with the record of diesel consumption from the diesel storage tank level gauge (liters)/or bunkering invoices (liters)
			Mobile Combustion	Combustion of fuels in transportation devices such as automobiles, helicopter, drilling rig, boats, ships, barges, vessels, etc.	Supply/Standby/Drilling/ Exploration vessels and installations (diesel engines)	Diesel consumption is reported by the vessel Master with the record of diesel storage tank level gauge (liters)/or from diesel invoices (liters)
					Helicopter Jet A-1 fuel	Helicopter fuel consumption is reported by Helicopter service providers (liters)
					Company vehicle diesel/ gasoline engines	Vehicle fuel consumption is reported by the record of vehicle travel distance in Kilometers/or fuel invoices (liters)
			Flaring	Controlled burning of natural gas and other hydrocarbon gases that are released during the production process.	Flare stack	Flare gas amount is reported by Operational site with the record of flare metering (standard cubic feet)
		Process Emission	Process	Emissions directly released from processes equipment as part of normal operations	Well testing	Calculated volume from duration, flow rate, pressure, and compositions reported by well test operations (standard cubic feet)
			Planned venting	Controlled releases of gas into the atmosphere during maintenance activities, safety procedures	Vents	Volume of venting reported by Operational sites if any with gas composition (standard cubic feet)

5. GHG EMISSIONS REPORTING CRITERIA (SCOPE 1 & 2) CONTINUED

Scope	Definition	Category	Sub Category	Definition	Source	Activity Data
Scope 1 (continued)	Direct GHG emissions occurring from sources which are owned or controlled by Mubadala Energy that release emission direct to the atmosphere	Fugitive Emission	Unplanned venting	Non-routine, unintentional release of gas into the atmosphere due to operational upsets, equipment failures, or other unexpected events.	Vents	Volume of venting reported by Operational sites when the event occurs (estimated standard cubic feet)
			Leaks from process equipment	Unintentional escape of gases or liquids from the operational systems used in exploration, production, processing, and transportation of hydrocarbons.	Vales, seals, flanges, connectors, Pressure relief devices, pumps, compressors, and process equipment	Fugitive emission constants multiplied by production volume (standard cubic feet)
			Air conditioner/Chiller using refrigerants classified as GHG GWP	Emissions from air conditioning and chiller systems primarily from refrigerant leaks	Cooling units	Fugitive emission reported by Operational sites with the weight loss upon replacement (kg)
Scope 2	Indirect GHG emissions account from the generation of purchased electricity consumed by Mubadala Energy within the operational boundaries	Purchased Electricity	Purchased Electricity	Electricity consumption from the utility grid	Offices, warehouses, supply bases, yards Emission factor is based on Grid Emission Factor of the utility	Electricity consumption is reported by the asset management of each location with the record of invoices (KWh)

Key notes:

1. GHG Data Reporting Period: The reporting period for GHG data covers the calendar year, commencing on 1 January and concluding on 31 December.
2. Reporting Boundaries and Operational Control: GHG reporting boundaries are determined based on the concept of “Operational Control”. This approach defines the scope of reporting responsibilities and the operational influence the organization has over its assets.
3. Methodology: Each asset within the defined reporting boundaries must identify all sources of GHG emissions, categorized as Scope 1 and Scope 2 emissions. The raw data collected from each asset is reported to the relevant Business Unit either daily or monthly, as appropriate. This data undergoes calculation and conversion according to the company’s internal guidelines, which reference the applicable emission factors derived from local regulatory guidelines and international standards and guidelines. The GHG emissions data from each Business Unit are then consolidated and reported to the corporate office on a monthly basis, which produces a comprehensive companywide GHG emissions report. This report, presented in the company’s Sustainability Report, includes emissions data in terms of the mass of CO₂e (carbon dioxide equivalent) or intensity metrics.

Reference standards and guidelines:

Independent limited assurance report to Mubadala Energy Holding Company LLC (“Mubadala Energy”) on the computation of selected sustainability metrics (“Selected Information”) prepared in accordance with Mubadala Energy’s Reporting Criteria (“Reporting Criteria”) and presented within the 2023 Sustainability Report (the “Report”).

SCOPE OF OUR ASSURANCE WORK

Mubadala Energy has engaged Deloitte & Touche (M.E.) (“**Deloitte**”) to perform limited assurance procedures on the computation of selected sustainability metrics (“Selected Information presented in the table below (**Table 1**)” for the years ended 31 December 2022 and 31 December 2023, presented within the Report.

SELECTED SUBJECT MATTER FOR ASSURANCE

Mubadala Energy’s reported performance during the given reporting periods for the Selected Information presented in Table 1 below:

Table 1: Selected Information

Selected Information	Assured figure for the year ended 31 December 2022	Assured figure for the year ended 31 December 2023
GHG Scope 1 emissions	289,389.53 (tCO ₂ eq)	195,583.38 (tCO ₂ eq)
GHG Scope 2 emissions	561.88 (tCO ₂ eq)	598.06 (tCO ₂ eq)

The above Selected Information has been assessed against the Reporting Criteria detailed within the Report and exclude Thailand operated assets up to the point of divestment and as at the end of quarter one of year 2023.

WHAT STANDARDS WE USED: BASIS OF OUR ASSURANCE WORK AND LEVEL OF ASSURANCE

We carried out limited assurance procedures over Mubadala Energy’s Selected Information in accordance with the International Standard on Assurance Engagements 3000 (Revised) “Assurance Engagements other than Audits or Reviews of Historical Financial Information” (“**ISAE 3000**”) and with the International Standard on Assurance Engagements 3410 “Assurance Engagements on Greenhouse Gas Statements” (“**ISAE 3410**”). To achieve limited assurance, ISAE 3000 and ISAE 3410 require that we review the processes, systems and competencies used to compile the Selected Information presented in the Report, on which we provide limited assurance. It does not include detailed testing for each of the selected sustainability metrics reported, or of the operating effectiveness of processes and internal controls.

The procedures performed in a limited assurance engagement vary in nature and timing from, and are less in extent than for, a reasonable assurance engagement. Consequently, the level of assurance obtained in a limited assurance engagement is substantially lower than the assurance that would have been obtained had a reasonable assurance engagement been performed. Consequently, our conclusion is not expressed as an audit opinion.

WHAT WE DID: KEY LIMITED ASSURANCE PROCEDURES

To form our conclusion, we undertook the following procedures:

- Understood the roles and responsibilities of the preparation, governance and oversight arrangements of the Selected Information and assess its preparation against the Reporting Criteria included in the Report;
- Performed enquiries with management to understand how the Reporting Criteria has been applied in the preparation of the Selected Information;
- Assessed the Reporting Criteria against market practice;
- Reviewed and evaluated the Reporting Criteria for measurement and reporting for each of the selected sustainability metrics against the actual calculation performed by Mubadala Energy to support the Selected Information shown in Table 1;
- Agreed the Selected Information to Mubadala Energy’s internal calculations and supporting documentation; and
- Assessed the availability and quality of evidence provided to support the Selected Information.

6. EMISSIONS ASSURANCE STATEMENT CONTINUED

INHERENT LIMITATIONS

The process an organisation adopts to define, gather, and report information on its non-financial performance is not subject to the formal processes adopted for financial reporting. Therefore, data of this nature is subject to variations in definitions, collection and reporting methodology, often with no consistent, accepted external standard. This may result in non-comparable information between organisations and from year to year within an organisation as methodologies develop. To support clarity in this process, Mubadala Energy has developed a Reporting Criteria document for the years ended 31 December 2022 and 31 December 2023, which defines the scope of each assured sustainability metric and the method of calculation. This Reporting Criteria is available in the Report and should be read together with this report.

In relation to our work performed on the Selected Information, we note the following specific limitations:

Our assurance procedures did not include detailed testing of general information technology controls of the underlying systems used by Mubadala Energy to collate and report data for the Selected Information; and With the exception of the Selected Information shown in the table above, our testing did not include assurance of, or detailed testing of the underlying data for any other sustainability metrics than those reported in Table 1, or of published assertions. As such, our work does not involve procedures to verify the accuracy of the performance data or assertions published.

OUR INDEPENDENCE AND QUALITY CONTROL

In carrying out our work, we have complied with the independence and other ethical requirements of the Code of Ethics for Professional Accountants issued by the International Ethics Standards Board for Accountants ("IESBA Code"), which are founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality and professional behaviour and the ethical requirements that are relevant in the United Arab Emirates. We have fulfilled our other ethical responsibilities in accordance with these requirements and the IESBA Code.

In performing our work, we applied International Standard on Quality Management (ISQM) 1 and accordingly maintain a comprehensive system of quality control including documented policies and procedures regarding compliance with ethical requirements, professional standards, and applicable legal and regulatory requirements.

ROLES AND RESPONSIBILITIES

Mubadala Energy:

Mubadala Energy's Health, Safety, Security & Environment (HSSE) Team is responsible for the preparation of the calculation for the Selected Information in accordance with the Reporting Criteria. Specifically, Mubadala Energy is responsible for ensuring that the information provided under the Selected Information is properly prepared in accordance with the Reporting Criteria and confirming the measurement or evaluation of the Selected Information against the applicable Reporting Criteria. The Management is also responsible for establishing and maintaining appropriate performance management and internal control systems from which the reported information is derived.

Deloitte:

Our responsibility is to provide a limited level of assurance on the Selected Information as defined within the scope of work above to Mubadala Energy in accordance with our letter of engagement, and report thereon. In conducting our limited assurance engagement, we have complied with the Code of Ethics for Professional Accountants issued by the International Ethics Standards Board for Accountants (IESBA Code).

Our work has been undertaken so that we might state to Mubadala Energy those matters we are required to state to them in this limited assurance report and for no other purpose. To the fullest extent permitted by law, we do not accept or assume responsibility to anyone other than Mubadala Energy for our work, for this report, or for the conclusion we have formed.

CONCLUSIONS

Based on our limited assurance procedures performed and evidence obtained, subject to the limitations mentioned above, nothing has come to our attention that causes us to believe that the Selected Information for the years ended 31 December 2022 and 31 December 2023 has not been prepared, in all material respects, in accordance with Mubadala Energy's Reporting Criteria as appropriate.

Deloitte & Touche (M.E.)

Abu Dhabi – United Arab Emirates

7. PERFORMANCE DATA (2021 – 2023)

ENVIRONMENT

GHG & Other Air Emissions		Unit	2021	2022	2023
1.	GHG Scope 1 Emissions	Tons CO ₂ e	886,703	1,105,401	376,613
2.	GHG Scope 2 Emissions	Tons CO ₂ e	869	860	675
3.	Total GHG Emissions – Scope 1 + Scope 2	Tons CO ₂ e	887,571	1,106,261	377,289
4.	GHG Emissions Intensity	TCO ₂ e/kboe	59.65	35.04	15.25
5.	VOC emissions	Tons	109	91	64
